1 Introduction

In This Document

This document provides schema information about the **Axioma** tables in Quantitative Analytics.

NOTE

For information about the other Quantitative Analytics tables, refer to the other Database Schema documents posted on the [Quantitative Analytics](#) product page on [MyAccount](#).

The documentation for each table includes these main elements:

- **Vendor Database or License Name** – This element provides the vendor database or license name. Vendor databases generally correspond to vendor licensing options.
- **Table Name: Table Title** – This element provides the table name and title, followed by a description of the table contents.
- **Update Cycle** – This element indicates the frequency of updates from the data vendor. (For specific information about when this update is posted for your use, refer to your update logs. The update log schema description is available in the Database Schema for Quantitative Analytics Core Tables document.)
- **Adjusted** – This element indicates whether the data is stored adjusted, unadjusted, or if adjustment is not applicable (N/A).
- **Indexes, Index Fields** – This element lists the table's index(es) (for example, pkey_CSGCAD) and the index fields. The primary index contains a "pkey_" or "PK_" prefix. Clustered indexes are noted.
- **Field, Type, Nullable, Definition** – This element describes the table's fields, including field names, data types, and whether each field is nullable. The data types in Snowflake have equivalents available. For example, an *int* in SQL Server is a *number* in Snowflake.

Intended Readership

This document is intended for Quantitative Analytics clients licensed to use **Axioma** data through LSEG. Note that the tables described in this document may be covered by several licenses; your access to the data in these tables is dependent on the licenses you have.

Readers should have basic knowledge of Microsoft SQL Server 2016.

Table Name Conventions

In Quantitative Analytics, database tables are grouped by name. Generally, the first few letters of the table name refer to the data vendor or licensing group. For example, all tables beginning with **Ax*** are Axioma data tables.

Mapping Information

When mapping Axioma content, use the VenType and VenCode values shown in the following table. For more information about mapping or for other vendors' VenType and VenCode values, refer to the Database Schema for Quantitative Analytics Core Tables document, available on the [Quantitative Analytics](#) product page on [MyAccount](#).

Security VenType Mapping for the SecMapX and GSecMapX Tables

Vendor	SecMapX/GSecMapX VenType	Vendor Table(s)	Vencode = [field]
Axioma	51	AxCusipChg, AxSedolChg	SecId

Pervasive and Oracle

This document is specific to Microsoft SQL Server 2016.

If you are accessing the data directly through the Pervasive database, you may encounter slight differences in index names and data types. Please note that references to Pervasive and Actian are synonymous.

If you are accessing the data through Oracle, note that field names that correspond to Oracle reserved words are appended with an underscore. For example, field names “Number”, “Synonym”, and “UID” become “Number_”, “Synonym_”, and “UID_” in Oracle.

Zero Values and Nulls

Null values are usually recorded as “NULL”. Occasionally, a table may contain a value of “-99999” or “-9999”; in these cases, there is no recorded data for that period. (It is null.)

If the table contains a “0” value, the data was reported as having a “0” value.

Service and Support

[MyAccount](#) is the LSEG portal that provides a single access point for timesaving support services, along with billing, user management, and information.

Statement of Service

The [Quantitative Analytics Service Description](#) is available on the [Quantitative Analytics](#) product page at [MyAccount](#).

Subscribe to Support Channels

You are encouraged to [subscribe](#) to the following support channels to keep informed of changes to products and data, and to be notified of any service issues or change. Please see the *Alerts and Notifications* section in the *Quantitative Analytics Service Description* available on the [Quantitative Analytics](#) product page at MyAccount for detailed instructions.

- **Change Notifications**
 - **Product Change Notifications (PCNs)** detail new, enhanced, or changed functionality, which may require your action, in products that you use.
 - **Data Notifications (DNs)** alert you to upcoming changes to real-time and historical data across all asset classes that are relevant to you.
 - **RIC Change Events** inform you of planned changes to RICs. RIC is the market level identifier key unique to LSEG used to identify securities.
- **Service Alerts**

Alert you about planned maintenance and unplanned service issues affecting your products and services, and be notified via SMS or email.

Documentation

You can access product documentation on the [Quantitative Analytics](#) product page at [MyAccount](#).

Get Support

For support using Quantitative Analytics, please use one of the following methods:

Online

Access [Get Support](#) either via the blue **Get Support** button at the top right of each page or by selecting *Get Support* located under *Help and Support* on the left navigation pane at [MyAccount](#).

From the *Get Support* page, choose *Get Product and Content Support* and then select the appropriate category from the next page. Complete the request making sure to include the following:

- Under Product, select Quantitative Analytics from the dropdown list.
- In the **How can we help you?** text box, include the following information:
 - Content set name (i.e. Worldscope)
 - Date applicable to a content inquiry
 - Table names and relevant fields

- Security code (i.e. QA-ID, PermID, Sedol, InfoCode, etc.)
- Script used to generate the output
- Any other supporting detail

Telephone

Region	Telephone	Options
AMERS	+01 866 427 8390	Option 1 – Product Support Option 2 – Technical Support
EMEA	+44 203 341 1036

Feedback

We invite your comments, corrections, and suggestions about this document: access the [Feedback](#) option under [Get Support](#) at [MyAccount](#). Your feedback helps us continue to improve our user assistance.

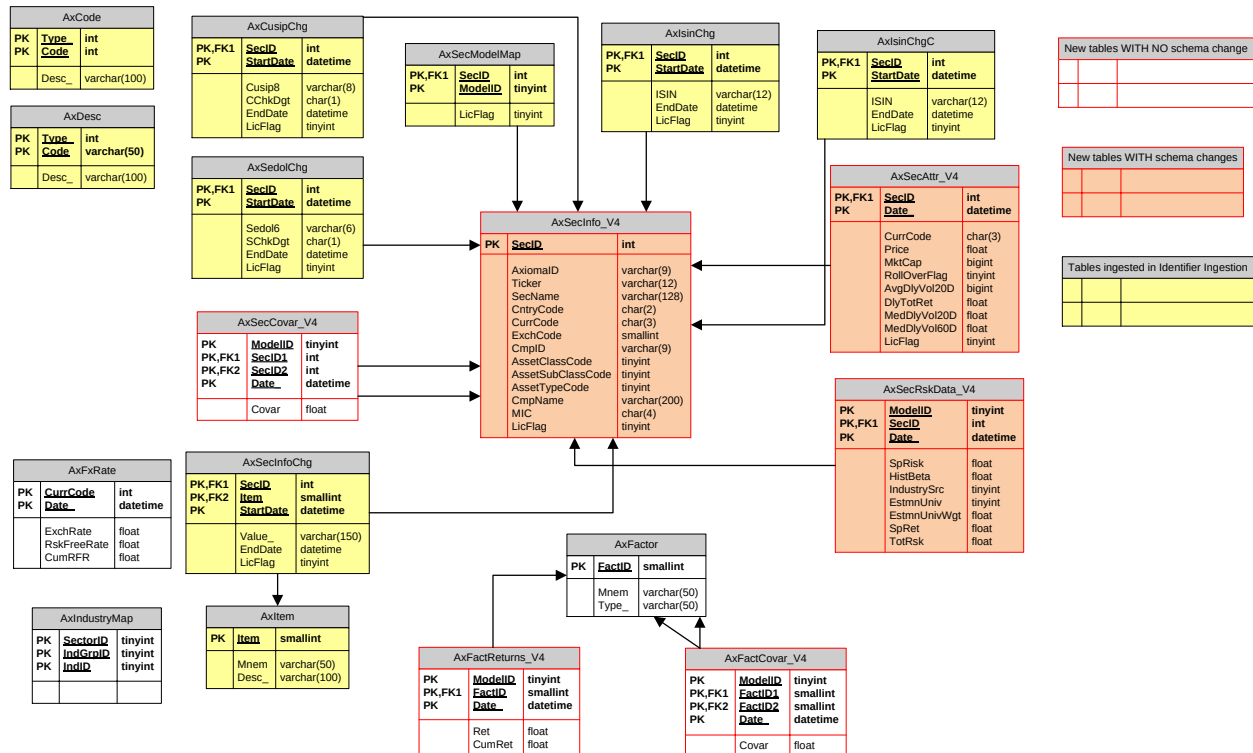

Your Personal Information

LSEG is committed to the responsible handling and protection of personal information. We invite you to review our [Privacy and Cookie Statement](#), which describes how we collect, use, disclose, transfer, and store personal information when needed to provide our services and for our operational and business purposes.

Axioma Exposure Tables

Axioma Data Tables

AxCode: Numeric Codes

This table contains descriptions of Axioma numeric codes.

Update Cycle: Daily

Adjusted: N/A

Indexes	Index Fields
pkey_AxCode (Clustered)	Type_, Code

Field	Type	Nullable	Description
Type_	int	N	Type_ is a numeric code for a type of data.
Code	int	N	Code is a coded value for an element of Type_. When Type_ = 0, Code is the numeric code for each Type_ other than 0 and Desc_ is a description of each Type_.
Desc_	varchar(100)	Y	Desc_ is a plain-language description of the element defined by Type_ and Code.

AxCusipChg: CUSIP Values

This table contains CUSIP values for each Axioma ID when provided in the feed.

Update Cycle: Daily

Adjusted: N/A

Indexes	Index Fields
pkey_AxCusipChg (Clustered)	SecID, StartDate

Field	Type	Nullable	Description
SecID	int	N	SecID is the unique identifier derived by Quantitative Data Warehouse (QDW) against every unique Axioma ID that is provided by the vendor.
StartDate	datetime	N	StartDate is the earliest date associated with the value. This date is system-generated.
Cusip8	varchar(8)	Y	Cusip8 is the CUSIP without check digit.
CChkDgt	char(1)	Y	CChkDgt is the CUSIP check digit.
EndDate	datetime	Y	EndDate is the date on which a change is made to the existing CUSIP.
LicFlag	tinyint	Y	LicFlag is a license flag based on country/region. This field cross-references with AxCode .Code where Type_ = 2.

AxDesc: Character Codes

This table contains descriptions of Axioma character codes.

Update Cycle: Daily

Adjusted: N/A

Indexes		Index Fields	
pkey_AxDesc (Clustered)		Type_, Code	
Field	Type	Nullable	Description
Type_	int	N	Type_ is a numeric code for a type of data.
Code	varchar(50)	N	Code is a coded value for an element of Type_. When Type_ = 0, Code is the numeric code for each Type_ other than 0 and Desc_ is a description of each Type_.
Desc_	varchar(100)	Y	Desc_ is a plain-language description of the element defined by Type_ and Code.

AxFactHolding: Factor-Related Information

This table contains factor-related information.

Update Cycle: Daily

Adjusted: N/A

Indexes		Index Fields	
pkey_AxFactHolding (Clustered)		Date_, ModelID, SecID, FactID	
Field	Type	Nullable	Description
ModelID	tinyint	N	ModelID is the unique integer that identifies each model. This field cross-references with AxCode .Code where Type_ = 1.
SecID	int	N	SecID is a unique identifier derived by Quantitative Data Warehouse (QDW) against every unique Axioma ID that is provided by the vendor.
FactID	smallint	N	FactID is a factor code defined in the AxFactor table.
Date_	datetime	N	Date_ is the file date.
Value_	varchar(20)	Y	Value_ is the security exposure to the fundamental value factor.

AxFactor: Input File Factors

This table contains the various factors in the input file, including Style, Industry, Country, Currency, Statistical, Market, and Local.

Update Cycle: Daily

Adjusted: N/A

Indexes	Index Fields
pkey_AxFactor (Clustered)	FactID

Field	Type	Nullable	Description
FactID	int	N	FactID is a factor code defined in the AxFactor table.
Mnem	varchar(50)	Y	Mnem is the mnemonic with which the factor is identified.
Type_	varchar(50)	Y	Type_ is the item type for the factor.

AxFxRate: Foreign Exchange Details

This table contains the ISO currency code and its exchange rate and risk-free rate details.

Update Cycle: Daily

Adjusted: N/A

Indexes	Index Fields
pkey_AxFxRate (Clustered)	Date_, CurrCode

Field	Type	Nullable	Description
CurrCode	int	N	CurrCode is the integer code corresponding to the three-letter ISO Currency Code. This field cross-references with AxCode .Code where Type_ = 9.
Date_	datetime	N	Date_ is the file date.
ExchRate	float	Y	ExchRate is the exchange rate to the base currency.
RskFreeRate	float	Y	RskFreeRate is the annualized risk-free rate.
CumRFR	float	Y	CumRFR is the cumulative risk-free rate.

AxIndustryMap: Industry Hierarchy

This table contains information about the industry hierarchy.

Update Cycle: Daily

Adjusted: N/A

Indexes	Index Fields
pkey_AxIndustryMap (Clustered)	SectorID, IndGrpID, IndID

Field	Type	Nullable	Description
SectorID	int	N	SectorID is the sector ID. This is the name of the node/factor. This field cross-references with AxCode .Code where Type_ = 5.
IndGrpID	int	N	IndGrpID is the industry group ID. This is the name of the parent node. This field cross-references with AxCode .Code where Type_ = 6.
IndID	int	N	IndID is the industry ID. This is the optional name of the hierarchy level. This field cross-references with AxCode .Code where Type_ = 7.

AxIsinChg: Ex-North American ISIN Values

This table contains ex-North American ISIN values for each Axioma ID provided in the feed. ISIN values that are not derived from CUSIPs are held in this table.

Update Cycle: Daily

Adjusted: N/A

Indexes		Index Fields	
pkey_AxIsinChg (Clustered)		SecID, StartDate	
Field	Type	Nullable	Description
SecID	int	N	SecID is the unique identifier derived by Quantitative Data Warehouse (QDW) for every unique Axioma ID that is provided by the vendor.
StartDate	datetime	N	StartDate is the earliest date associated with the value. This date is system-generated.
ISIN	varchar(12)	Y	ISIN is the ISIN value.
EndDate	datetime	Y	EndDate is the date on which a change is made to the existing ISIN.
LicFlag	tinyint	Y	LicFlag is a license flag based on country/region. This field cross-references with AxCode .Code where Type_ = 2.

AxIsinChgC: North American ISIN Values

This table contains North American ISIN values for each Axioma ID provided in the feed. These are derived from CUSIPs.

Update Cycle: Daily

Adjusted: N/A

Indexes		Index Fields	
pkey_AxIsinChgC (Clustered)		SecID, StartDate	
Field	Type	Nullable	Description
SecID	int	N	SecID is the unique identifier derived by Quantitative Data Warehouse (QDW) for every unique Axioma ID that is provided by the vendor.
StartDate	datetime	N	StartDate is the earliest date associated with the value. This date is system-generated.
ISIN	varchar(12)	Y	ISIN is the ISIN value.
EndDate	datetime	Y	EndDate is the date on which a change is made to the existing ISIN.
LicFlag	tinyint	Y	LicFlag is a license flag based on country/region. This field cross-references with AxCode .Code where Type_ = 2.

AxItem: Data Item Information

This table contains the item code assigned to the individual identifiers.

Update Cycle: Daily

Adjusted: N/A

Indexes		Index Fields	
pkey_AxItem (Clustered)		Item	
Field	Type	Nullable	Description
Item	smallint	N	Item is a unique integer code that identifies an item. It joins to AxSecInfoChg .Item.
Mnem	varchar(50)	Y	Mnemonic is a single-word, alphanumeric coded name for the item. This code name is as received in the feed file.
Desc_	varchar(100)	Y	Desc_ is a short description of the item.

AxSecInfo_V4: Security-Level Details

This table contains the security-level information provided by Axioma. The identifiers like CUSIP, SEDOL, and ISIN are provided in separate tables.

Update Cycle: Daily

Adjusted: N/A

Indexes		Index Fields	
pkey_AxSecInfo (Clustered)		SecID	
Field	Type	Nullable	Description
SecID	int	N	SecID is the unique identifier derived by Quantitative Data Warehouse (QDW) for every unique Axioma ID that is provided by the vendor.
AxiomaID	varchar(9)	N	AxiomaID is the unique identifier provided by the vendor.
Ticker	varchar(12)	Y	Ticker is the ticker value provided in the input file by the vendor.
SecName	varchar(128)	Y	SecName is the security name provided in the input file.
CntryCode	char(2)	Y	CntryCode is the ISO country code provided in the input file. This field cross-references with AxDesc.Code where Type_ = 1.
CurrCode	char(3)	Y	CurrCode is the ISO currency code provided in the input file. This field cross-references with AxDesc.Code where Type_ = 2.
ExchCode	smallint	Y	ExchCode is the stock exchange detail provided in the input file. This field cross-references with AxDesc.Code where Type_ = 4.
CmpID	varchar(9)	Y	CmpID is the permanent issuer identifier assigned by Axioma.
AssetClassCode	tinyint	Y	Tier 2 of Axioma Security Type Classification (e.g., Depository Receipt-C).
AssetSubClassCode	tinyint	Y	Tier 3 of Axioma Security Type Classification (e.g., ADR-S).
AssetTypeCode	tinyint	Y	Tier 1 of Axioma Security Type Classification (e.g., Equities-T).
CmpName	varchar(200)	Y	Issuer Name assigned by Axioma.
MIC	char(4)	Y	Market Identifier Code (MIC).
LicFlag	tinyint	Y	LicFlag is a license flag based on country/region. This field cross-references with AxDesc.Code where Type_ = 2.

AxSecAttr_V4: Security Market-Level Attributes

This table contains the market-level attributes associated with a particular security.

Update Cycle: Daily

Adjusted: N/A

Indexes		Index Fields	
pkey_AxSecAttr (Clustered)		Date_, SecID	
Field	Type	Nullable	Description
SecID	int	N	SecID is a unique identifier derived by Quantitative Data Warehouse (QDW) against every unique Axioma ID that is provided by the vendor.
Date_	datetime	N	Date_ is the file date.
CurrCode	char(3)	Y	CurrCode is the ISO currency code value provided in the input file.
Price	float	Y	Price is the closing price expressed in the currency of quotation.
MktCap	bigint	Y	MktCap is the market capitalization.
RollOverFlag	tinyint	Y	A RollOverFlag value of 1 indicates that no official price was available. In this case, the price rollover from the most official closing price is used.
AvgDlyVol20D	bigint	Y	AvgDlyVol20D is the 20-day average daily trading volume.
DlyTotRet	float	Y	DlyTotRet is the daily total return percentage expressed in currency of quotation.

Field	Type	Nullable	Description
AvgDlyVol60D	bigint	Y	AvgDlyVol60D is the 60-day average daily trading volume.
LicFlag	tinyint	Y	LicFlag is the license flag, which is based on country/region. This field cross-references with AxCode .Code where Type_ = 2.

AxSecRskData_V4: Security Risk Data

This table contains the risk related-details associated with a particular security in a particular model.

Update Cycle: Daily

Adjusted: N/A

Indexes	Index Fields
pkey_AxSecRskData (Clustered)	Date_, ModelID, SecID

Field	Type	Nullable	Description
ModelID	tinyint	N	ModelID is the unique integer that identifies each model. This field cross-references with AxCode .Code where Type_ = 1.
SecID	int	N	SecID is the unique identifier derived by Quantitative Data Warehouse (QDW) for every unique Axioma ID that is provided by the vendor.
Date_	datetime	N	Date_ is the file date.
SpRisk	float	Y	SpRisk is the specific risk of the asset.
HistBeta	float	Y	HistBeta is the historical beta against the local market.
IndustrySrc	tinyint	Y	IndustrySrc is the data source of the industry membership. This field cross-references with AxCode .Code where Type_ = 8.
EstmnUniv	tinyint	Y	An EstmnUniv value of 1 indicates that the assets were used in estimating the factor returns.
EstmnUnivWgt	float	Y	EstmnUnivWgt is the weight of assets in the estimation universe; this field is blank if the asset is not in the estimation universe.
SpRet	float	Y	SpRet is the daily specific return.
TotRsk	float	Y	TotRsk is the total risk of the asset.

AxFactReturns_V4: Factor Return Values

This table contains the return values for each of the factors.

Update Cycle: Daily

Adjusted: N/A

Indexes	Index Fields
pkey_AxFactReturns (Clustered)	Date_, ModelID, FactID

Field	Type	Nullable	Description
ModelID	tinyint	N	ModelID is the unique integer that identifies each model. This field cross-references with AxCode .Code where Type_ = 1.
FactID	smallint	N	FactID is a factor code defined in the AxFactor table.
Date_	datetime	N	Date_ is the file date.
Ret	float	Y	Ret is the daily factor return.
CumRet	float	Y	CumRet is the cumulative factor return.

AxFactCovar_V4: Covariance Values

This table contains covariance values for pairs of factors in each model.

Update Cycle: Daily

Adjusted: N/A

Indexes			Index Fields
pkey_AxFactCovar (Clustered)			Date_, ModelID, FactID1, FactID2
Field	Type	Nullable	Description
ModelID	tinyint	N	ModelID is the unique integer that identifies each model. This field cross-references with AxCode .Code where Type_ = 1.
FactID1	int	N	FactID1 and FactID2 are factor codes defined in the AxFactor table.
FactID2	int	N	
Date_	datetime	N	Date_ is the file date.
Covar	float	Y	Covar is the covariance between the two factors.

AxSecCovar_V4: Covariance Values

This table contains the covariance values for a pair of securities in each model.

Update Cycle: Daily

Adjusted: N/A

Indexes			Index Fields
pkey_AxSecCovar (Clustered)			Date_, ModelID, SecID1, SecID2
Field	Type	Nullable	Description
ModelID	tinyint	N	ModelID is the unique integer that identifies each model. This field cross-references with AxCode .Code where Type_ = 1.
SecID1	int	N	SecID1 and SecID2 are unique identifiers dervied by Quantitative Data Warehouse (QDW) against every unique Axioma ID that is provided by the vendor.
SecID2	int	N	
Date_	datetime	N	Date_ is the file date.
Covar	float	Y	Covar is the specific covariance between the two securities.

AxSecInfoChg: Historical Security-Level Details

This table contains the historical details of all the identifiers.

Update Cycle: Daily

Adjusted: N/A

Indexes			Index Fields
pkey_AxSecInfoChg (Clustered)			SecID, Item, StartDate
Field	Type	Nullable	Description
SecID	int	N	SecID is the unique identifier derived by Quantitative Data Warehouse (QDW) for every unique Axioma ID that is provided by the vendor.
Item	smallint	N	Item is a unique integer code that identifies an item.
StartDate	datetime	N	StartDate is the earliest date associated with the value. This date is system-generated.
Value_	varchar(150)	Y	Value_ is the value that corresponds to the item.
EndDate	datetime	Y	EndDate is the date on which the value associated with the item changes.
LicFlag	tinyint	Y	LicFlag is a license flag based on country/region.
			This field cross-references with AxCode .Code where Type_ = 2.

AxSecModelMap: Security and Model Identification

This table contains the SecID and the corresponding ModelID.

Update Cycle: Daily

Adjusted: N/A

Indexes		Index Fields	
pkey_AxSecModelMap (Clustered)		SecID, ModelID	
Field	Type	Nullable	Description
SecID	int	N	SecID is the unique identifier derived by Quantitative Data Warehouse (QDW) for every unique Axioma ID that is provided by the vendor.
ModelID	tinyint	N	ModelID is the unique integer that identifies each model. This field cross-references with AxCode .Code where Type_ = 1.
LicFlag	tinyint	Y	LicFlag is a license flag based on country/region. This field cross-references with AxCode .Code where Type_ = 2.

AxSedolChg: SEDOL Values

This table contains SEDOL values for each Axioma ID when provided in the feed.

Update Cycle: Daily

Adjusted: N/A

Indexes		Index Fields	
pkey_AxSedolChg (Clustered)		SecID, StartDate	
Field	Type	Nullable	Description
SecID	int	N	SecID is the unique identifier derived by Quantitative Data Warehouse (QDW) for every unique Axioma ID that is provided by the vendor.
StartDate	datetime	N	StartDate is the earliest date associated with the value. This date is system-generated.
Sedol6	varchar(6)	Y	Sedol6 is the SEDOL without check digit.
SChkDgt	char(1)	Y	SChkDgt is the SEDOL check digit.
EndDate	datetime	Y	EndDate is the date on which a change is made to the existing SEDOL.
LicFlag	tinyint	Y	LicFlag is a license flag based on country/region. This field cross-references with AxCode .Code where Type_ = 2.

Axioma Style Factor Summary

Axioma describes their style factors as follows:

- **Exchange-Rate Sensitivity** – This is a measure of a stock's sensitivity to exchange rates as measured relative to a basket of currencies. Stocks with a positive Exchange-Rate Sensitivity score move in line with a basket of currencies, indicating that a larger proportion of business may come from non-domestic sources.
- **Growth** – Growth gives an indication of a company's rate of growth historically. The growth factor is calculated as the product of one minus the dividend pay-out rate and the one-year return on equity. Stocks with a positive Growth score have recently experienced high growth levels as reflected by high retained earnings and high return on equity.
- **Leverage** – Leverage provides a measure of a company's exposure to debt levels. This exposure is calculated as total debt divided by market capitalization. Total debt is the sum of long-term debt and debt in current liabilities (short-term debt). Stocks with a positive Leverage score have higher debt levels as a proportion of their stock market capitalization.

- **Liquidity** – The liquidity factor provides a measure of a stock's trading activity, or lack thereof. The basic input is the last 20-day average volume divided by the last 20-day average market capitalization. Stocks with a positive Liquidity score are easier to trade in the market.
- **Market Sensitivity** – This is a measure of a stock's under- or over-performance relative to the broad market from historical data. The basic input into this style is a traditional historical beta. Stocks with a positive Market Sensitivity score have larger historical betas.
- **Medium-Term Momentum** – The Medium-Term Momentum gives a measure of a stock's past performance over the medium-term. It is defined as an asset's cumulative return over the last 300 trading days, excluding the last 20 trading days. Stocks with a positive Medium-Term Momentum score have outperformed over the past 13 months (excluding last month).
- **Short-Term Momentum** – Short-Term Momentum gives a measure of a stock's recent performance. It is defined as an asset's cumulative return over the last 20 trading days. Stocks with a positive Short-Term Momentum score have outperformed over the past month.
- **Size** – Differentiation of stocks based on market capitalization (for example, large and small stocks). It is defined using the market capitalization, averaged over the last 20 trading days. Market capitalization is computed as the product of the total shares outstanding and the unadjusted closing price on each day. Stocks with a positive Size score are larger capitalization stocks.
- **Value** – Value gives a measure of how fairly a stock is priced within the market. The Value factor is calculated as the ratio of common equity to the current market capitalization (Book-to-Price). Stocks with a positive Value score have a high Book-to-Price and are viewed as relatively inexpensive as compared to their book value.
- **Volatility** – Volatility gives a measure of an asset's relative volatility over time according to its historical behavior. The basic input into this style is an asset's absolute return averaged over the last 60 days divided by the cross-sectional volatility of the market. Stocks with a positive Volatility score have had very high or very low returns over the past quarter.

AxUS4MHStatExpDly: Daily Exposure Details for U.S. – Medium Horizon Statistical Factors

This table contains daily exposure details for U.S. – Medium Horizon statistical factors.

Update Cycle: Daily **Adjusted:** N/A

Indexes		Index Fields	
pkey_AxUS4MHStatExpDly (clustered)		SecID, Date_	

Field	Type	Nullable	Description
SecID	int	N	Unique identifier derived by TRDW against every unique Axioma ID that is provided by the vendor.
Date_	datetime	N	File Date.
StatFact1	float	Y	Statistical Factor 1.
StatFact2	float	Y	Statistical Factor 2.
StatFact3	float	Y	Statistical Factor 3.
StatFact4	float	Y	Statistical Factor 4.
StatFact5	float	Y	Statistical Factor 5.
StatFact6	float	Y	Statistical Factor 6.
StatFact7	float	Y	Statistical Factor 7.
StatFact8	float	Y	Statistical Factor 8.
StatFact9	float	Y	Statistical Factor 9.
StatFact10	float	Y	Statistical Factor 10.
StatFact11	float	Y	Statistical Factor 11.
StatFact12	float	Y	Statistical Factor 12.
StatFact13	float	Y	Statistical Factor 13.
StatFact14	float	Y	Statistical Factor 14.
StatFact15	float	Y	Statistical Factor 15.

AxUS4MHStyleExp: Exposure Details for U.S. – Medium Horizon Fundamental Factors

This table contains exposure details for U.S. – Medium Horizon fundamental factors, which do not change on a daily basis.

Update Cycle: As needed (checked daily; updated when there is a change)

Adjusted: N/A

Indexes		Index Fields	
pkey_AxUS4MHStyleExp (clustered)		SecID, StartDate	
Field	Type	Nullable	Description
SecID	int	N	Unique identifier derived by TRDW against every unique Axioma ID that is provided by the vendor.
StartDate	datetime	N	The earliest date when the data was made available for this factor.
IndID	tinyint	Y	IndID is the code for the industry.
EndDate	datetime	Y	The date at which a change is effective to either of the values present in this table.

AxUS4MHStyleExpDly: Daily Exposure Details for U.S. – Medium Horizon Style Factors

This table contains daily exposure details for U.S. – Medium Horizon style factors. For details about Axioma's style factors, see [Axioma Style Factor Summary](#).

Update Cycle: Daily

Adjusted: N/A

Indexes		Index Fields	
pkey_AxUS4MHStyleExpDly (clustered)		SecID, Date_	
Field	Type	Nullable	Description
SecID	int	N	Unique identifier derived by TRDW against every unique Axioma ID that is provided by the vendor.
Date_	datetime	N	File Date.
Value_	float	Y	Value_ is the value that corresponds to the item.
Leverage	float	Y	Total debt (current and long-term liabilities) to total assets
Growth	float	Y	Sales growth, estimated sales growth, earnings growth, estimated earnings growth
Size_	float	Y	Natural logarithm of market capitalization
MedTermMomentum	float	Y	Cumulative return over past year excluding most recent month
MidCap	float	Y	TBD
Volatility	float	Y	6 month average of absolute returns over cross-sectional standard deviation, partially orthogonalized to Market Sensitivity
Liquidity	float	Y	Ln 3 month average daily volume over market capitalization
ExRateSensitivity	float	Y	Two year weekly beta to returns of currency basket containing USD, EUR, GBP, JPY
MktSensitivity	float	Y	1 year daily beta
DivYield	float	Y	Ratio of sum of the dividends paid (excluding non-recurring, special dividends) over the most recent year to average market capitalization
EarnYield	float	Y	Earnings-to-price and estimated earnings-to-price
Profitability	float	Y	Return-on-equity, return-on-assets, cash flow to assets, cash flow to income, gross margin, and sales-to-assets
MktIntercept	bit	Y	TBD

AxUS4SHStatExpDly: Daily Exposure Details for U.S. – Short Horizon Statistical Factors

This table contains daily exposure details for U.S. – Short Horizon statistical factors.

Update Cycle: Daily

Adjusted: N/A

Indexes		Index Fields	
pkey_AxUS4MHStatExpDly (clustered)		SecID, Date_	

Field	Type	Nullable	Description
SecID	int	N	Unique identifier derived by TRDW against every unique Axioma ID that is provided by the vendor.
Date_	datetime	N	File Date.
StatFact1	float	Y	Statistical Factor 1.
StatFact2	float	Y	Statistical Factor 2.
StatFact3	float	Y	Statistical Factor 3.
StatFact4	float	Y	Statistical Factor 4.
StatFact5	float	Y	Statistical Factor 5.
StatFact6	float	Y	Statistical Factor 6.
StatFact7	float	Y	Statistical Factor 7.
StatFact8	float	Y	Statistical Factor 8.
StatFact9	float	Y	Statistical Factor 9.
StatFact10	float	Y	Statistical Factor 10.
StatFact11	float	Y	Statistical Factor 11.
StatFact12	float	Y	Statistical Factor 12.
StatFact13	float	Y	Statistical Factor 13.
StatFact14	float	Y	Statistical Factor 14.
StatFact15	float	Y	Statistical Factor 15.

AxUS4SHStyleExp: Exposure Details for U.S. – Short Horizon Fundamental Factors

This table contains exposure details for U.S. – Short Horizon fundamental factors, which do not change on a daily basis.

Update Cycle: As needed (checked daily; updated when there is a change)

Adjusted: N/A

Indexes		Index Fields	
pkey_AxUS4SHStyleExp (clustered)		SecID, StartDate	

Field	Type	Nullable	Description
SecID	int	N	Unique identifier derived by TRDW against every unique Axioma ID that is provided by the vendor.
StartDate	datetime	N	File Date.
IndID	tinyint	Y	IndID is the code for the industry.
EndDate	datetime	Y	The date at which a change is effective to either of the values present in this table.
