1 Introduction

In This Document

This document provides schema information about the **Commodity Research Bureau (CRB)** tables in Quantitative Analytics.

NOTE

For information about the other Quantitative Analytics tables, refer to the other Database Schema documents posted on the [Quantitative Analytics](#) product page on [MyAccount](#).

The documentation for each table includes these main elements:

- **Vendor Database or License Name** – This element provides the vendor database or license name. Vendor databases generally correspond to vendor licensing options.
- **Table Name: Table Title** – This element provides the table name and title, followed by a description of the table contents.
- **Update Cycle** – This element indicates the frequency of updates from the data vendor. (For specific information about when this update is posted for your use, refer to your update logs. The update log schema description is available in the Database Schema for Quantitative Analytics Core Tables document.)
- **Adjusted** – This element indicates whether the data is stored adjusted, unadjusted, or if adjustment is not applicable (N/A).
- **Indexes, Index Fields** – This element lists the table's index(es) (for example, pkey_CSGCAD) and the index fields. The primary index contains a "pkey_" or "PK_" prefix. Clustered indexes are noted.
- **Field, Type, Nullable, Definition** – This element describes the table's fields, including field names, data types, and whether each field is nullable. The data types in Snowflake have equivalents available. For example, an *int* in SQL Server is a *number* in Snowflake.

Intended Readership

This document is intended for Quantitative Analytics clients licensed to use **CRB** data through LSEG. Note that the tables described in this document may be covered by several licenses; your access to the data in these tables is dependent on the licenses you have. Readers should have basic knowledge of Microsoft SQL Server 2016.

Table Name Conventions

In Quantitative Analytics, database tables are grouped by name. Generally, the first few letters of the table name refer to the data vendor or licensing group. For example, all tables beginning with **CM*** are CRB commodities data tables.

Pervasive and Oracle

This document is specific to Microsoft SQL Server 2016. If you are accessing the data directly through the Pervasive database, you may encounter slight differences in index names and data types. Please note that references to Pervasive and Actian are synonymous.

If you are accessing the data through Oracle, note that field names that correspond to Oracle reserved words are appended with an underscore. For example, field names "Number", "Synonym", and "UID" become "Number_", "Synonym_", and "UID_" in Oracle.

Zero Values and Nulls

Null values are usually recorded as "NULL". Occasionally, a table may contain a value of "-99999" or "-9999"; in these cases, there is no recorded data for that period. (It is null.) If the table contains a "0" value, the data was reported as having a "0" value.

Service and Support

[MyAccount](#) is the LSEG portal that provides a single access point for timesaving support services, along with billing, user management, and information.

Statement of Service

The [Quantitative Analytics Service Description](#) is available on the [Quantitative Analytics](#) product page at [MyAccount](#).

Subscribe to Support Channels

You are encouraged to [subscribe](#) to the following support channels to keep informed of changes to products and data, and to be notified of any service issues or change. Please see the *Alerts and Notifications* section in the *Quantitative Analytics Service Description* available on the [Quantitative Analytics](#) product page at MyAccount for detailed instructions.

- **Change Notifications**
 - **Product Change Notifications (PCNs)** detail new, enhanced, or changed functionality, which may require your action, in products that you use.
 - **Data Notifications (DNs)** alert you to upcoming changes to real-time and historical data across all asset classes that are relevant to you.
 - **RIC Change Events** inform you of planned changes to RICs. RIC is the market level identifier key unique to LSEG used to identify securities.
- **Service Alerts**

Alert you about planned maintenance and unplanned service issues affecting your products and services, and be notified via SMS or email.

Documentation

You can access product documentation on the [Quantitative Analytics](#) product page at [MyAccount](#).

Get Support

For support using Quantitative Analytics, please use one of the following methods:

Online

Access [Get Support](#) either via the blue [Get Support](#) button at the top right of each page or by selecting *Get Support* located under *Help and Support* on the left navigation pane at [MyAccount](#).

From the *Get Support* page, choose *Get Product and Content Support* and then select the appropriate category from the next page. Complete the request making sure to include the following:

- Under Product, select Quantitative Analytics from the dropdown list.
- In the **How can we help you?** text box, include the following information:
 - Content set name (i.e. Worldscope)
 - Date applicable to a content inquiry
 - Table names and relevant fields
 - Security code (i.e. QA-ID, PermID, Sedol, InfoCode, etc.)
 - Script used to generate the output
 - Any other supporting detail

Telephone

Region	Telephone	Options
AMERS	+01 866 427 8390	Option 1 – Product Support Option 2 – Technical Support
EMEA	+44 203 341 1036	
APAC	+65 6403 7436	

Feedback

We invite your comments, corrections, and suggestions about this document: access the [Feedback](#) option under [Get Support](#) at [MyAccount](#). Your feedback helps us continue to improve our user assistance.

Your Personal Information

LSEG is committed to the responsible handling and protection of personal information. We invite you to review our [Privacy and Cookie Statement](#), which describes how we collect, use, disclose, transfer, and store personal information when needed to provide our services and for our operational and business purposes.

2 CRB Futures Data Tables

The tables in this chapter contain data for all types of futures – commodities, currencies, and financials (stock indices, interest rates).

CMContr: Futures Contracts

NOTE

This table is not available in Quantitative Analytics hosted.

This table contains the identifier and description for futures contracts.

Update Cycle: Daily

Adjusted: N/A

Indexes		Index Fields	
pkey_cmcontr (Clustered)		Ticker	
cmcontr_Name		Name	

Field	Type	Nullable	Description
Ticker	varchar(30)	N	Ticker is the internal identifier for the commodity/currency/financial.
Name	varchar(60)	Y	Name is the text description of the commodity/currency/financial. The date indicates the month and year of the expiration of the contract.

CMDaily: Futures Daily Prices

This table contains the daily prices for futures contracts.

Update Cycle: Daily

Adjusted: No

Indexes		Index Fields	
pkey_cmdaily (Clustered)		InfoCode, Contract, Date_	

Field	Type	Nullable	Description
InfoCode	int	N	InfoCode is a primary link across CM* tables.
Contract	datetime	N	Contract is the month and year of the contract, with the default day as the first day of the month.
Date_	smalldatetime	N	Date_ is the trading date.
Open_	float	Y	Open_ is the open price on the given date.
High	float	Y	High is the high price on the given date.
Low	float	Y	Low is the low price on the given date.
Close_	float	Y	Close_ is the close price on the given date.
Volume	float	Y	Volume is the trading volume on the given date.
Interest	float	Y	Interest is the open interest on the given date.

CMExpCal: Futures Expiration

Use this table to retrieve futures contract expiration information.

Update Cycle: Daily

Adjusted: N/A

Indexes	Index Fields
pkey_CmExpCal (Clustered)	Name
CmExpCal_Code	Code

Field	Type	Nullable	Description
Name	varchar(20)	N	Name is the internal identifier for the commodity/currency/financial. It joins to CMInfo .Ticker.
Description	varchar(160)	Y	Description is the text description of the commodity/currency/financial.
Code	int	N	Code joins to CMInfo .StartMonth.

CMExpMth: Expiration Month Futures Contracts

This table contains expiration data for month futures contracts.

Update Cycle: Daily

Adjusted: No

Indexes	Index Fields
pkey_CmExpMth (Clustered)	Code, Contract

Field	Type	Nullable	Description
Code	int	N	Code joins to CMInfo .StartMonth.
Contract	smalldatetime	N	Contract is the month and year of the contract, with the default day as the first day of the month.
ExpDate	smalldatetime	N	ExpDate is the contract expiration date.

CMFutVol: Futures Volatility

This table contains volatility data for futures contracts.

Update Cycle: Daily

Adjusted: No

Indexes	Index Fields
pkey_cmfutvol (Clustered)	InfoCode, ExpMonth, date_

Field	Type	Nullable	Description
InfoCode	int	N	InfoCode is a primary link across CM* tables.
ExpMonth	smalldatetime	N	ExpMonth is the month the contract expires.
date_	smalldatetime	N	date_ is the pricing date for the given values.
HistVol	real	Y	HistVol is the historical volatility.
AtmImpVol	real	Y	AtmImpVol is the at-the-money implied volatility.
Flags	int	Y	Flags is an internal flag for use by Quantitative Analytics.

CMInfo: Futures Information

This is the master information table for futures contracts.

Update Cycle: Daily

Adjusted: N/A

Indexes	Index Fields
pkey_cminfo (Clustered)	InfoCode
cminfo_Ticker	Ticker
cminfo_Name	Name

Field	Type	Nullable	Description
Ticker	varchar(30)	Y	Ticker is the internal identifier for the commodity/currency/financial.
Name	varchar(60)	Y	Name is the text description of the commodity/currency/financial.
InfoCode	int	N	InfoCode is a primary link across CM* tables.
StartMonth	int	Y	A zero in StartMonth and Frequency represent the current contract period.
Frequency	int	Y	See the StartMonth description above.

CMRoll: Futures Series Rollover

NOTE

This table is not available in Quantitative Analytics hosted.

This table contains futures series rollover data.

Update Cycle: Daily

Adjusted: No

Indexes	Index Fields
pkey_Cmroll (Clustered)	SeriesCode, Deferral, RollDate

Field	Type	Nullable	Description
SeriesCode	int	N	SeriesCode identifies the series. It joins to CMSeries .SeriesCode.
Deferral	int	N	Deferral is zero unless a user manually enters a new contract series in the database specifying a different contract expiration period. Zero is always the current contract period from the current date.
RollDate	smalldatetime	N	RollDate is the first date a new contract is used as the front contract.
Contract	smalldatetime	Y	Contract is the contract expiration date.
CashFlow	float	Y	CashFlow is the result of the roll to a new contract in a futures time series.
PriceUnits	float	Y	PriceUnits is the number of units used to compute a futures time series.

CMSeries: Futures Series

NOTE

This table is not available in Quantitative Analytics hosted.

This table contains futures series information.

Update Cycle: Daily **Adjusted:** No

Indexes	Index Fields
pkey_Cmseries (Clustered)	InfoCode, SeriesCode
cmseries_Ticker	Ticker
cmseries_Name	Name
cmseries_SeriesCode	SeriesCode

Field	Type	Nullable	Description
Ticker	varchar(30)	Y	Ticker is the internal identifier of the commodity/currency/financial.
Name	varchar(60)	Y	Name is the text description of the commodity/currency/financial.
SeriesCode	int	N	SeriesCode identifies the series. It joins to CMRoll .SeriesCode.
InfoCode	int	N	InfoCode is a primary link across CM* tables.
RollType	int	Y	RollType can be: – 1 - Roll on next price date after expiration – 2 - Roll on last day of month prior to expiration, or next price date – 3 - Roll specified number of days prior to next price date – 4 - Roll on volume crossover – 5 - Roll on open interest crossover
RollDays	int	Y	RollDays is the number under X roll days before expiration.
AdjType	int	Y	AdjType can be: – 1 – UNADJUST – 2 – REINVEST – 3 – BACKFACTOR – 4 – BACKDIFF
ContractMonths	varchar(12)	Y	ContractMonths indicates the contract months included, listing January through December as either True (T) or False (F). For example, if all months are included except March, then all values will be True except the value for the third month, March, which will be False. This is displayed as: TTFTTTTTTTTT.

3 CRB Spot Data Tables

The tables in this chapter contain data for all types of spot trades – commodities, currencies, and financials (stock indices, interest rates).

SpotDly: Spot Daily Prices

This table contains daily data on spot prices.

Update Cycle: Daily

Adjusted: No

Indexes	Index Fields
pkey_spotdly (Clustered)	Code, Date_
spotdly_Date_	Date_, Code, Open_, High, Low, Close_, Volume, Interest

Field	Type	Nullable	Description
Code	int	N	Code is the primary link across all Spot* tables.
Date_	datetime	N	Date_ is the trading date.
Open_	float	Y	Open_ is the open price on the given date.
High	float	Y	High is the high price on the given date.
Low	float	Y	Low is the low price on the given date.
Close_	float	Y	Close_ is the close price on the given date.
Volume	float	Y	Volume is the trading volume on the given date.
Interest	float	Y	Interest is the open interest on the given date.

SpotInfo: Spot Information

Use this table to retrieve spot information.

Update Cycle: Daily

Adjusted: No

Indexes	Index Fields
pkey_spotinfo (Clustered)	Code
spotinfo_Name	Name
spotinfo_Ticker	Ticker

Field	Type	Nullable	Description
Ticker	varchar(30)	Y	Ticker is an abbreviated mnemonic for the commodity/currency/financial.
Name	varchar(60)	Y	Name is the text description of the commodity/currency/financial.
Code	int	Y	Code is the primary link across all Spot* tables.
