1 Introduction

In This Document

This document provides schema information about the **Interactive Data Corporation (IDC) North American Pricing** data tables in Quantitative Analytics.

NOTE

For information about the other Quantitative Analytics tables, refer to the other Database Schema documents posted on the [Quantitative Analytics](#) product page on [MyAccount](#).

The documentation for each table includes these main elements:

- **Vendor Database or License Name** – This element provides the vendor database or license name. Vendor databases generally correspond to vendor licensing options.
- **Table Name: Table Title** – This element provides the table name and title, followed by a description of the table contents.
- **Update Cycle** – This element indicates the frequency of updates from the data vendor. (For specific information about when this update is posted for your use, refer to your update logs. The update log schema description is available in the Database Schema for Quantitative Analytics Core Tables document.)
- **Adjusted** – This element indicates whether the data is stored adjusted, unadjusted, or if adjustment is not applicable (N/A).
- **Indexes, Index Fields** – This element lists the table's index(es) (for example, pkey_CSGCAD) and the index fields. The primary index contains a "pkey_" or "PK_" prefix. Clustered indexes are noted.
- **Field, Type, Nullable, Definition** – This element describes the table's fields, including field names, data types, and whether each field is nullable. The data types in Snowflake have equivalents available. For example, an *int* in SQL Server is a *number* in Snowflake.

Intended Readership

This document is intended for Quantitative Analytics clients licensed to use **IDC North American Pricing** data through LSEG. Note that the tables described in this document may be covered by several licenses; your access to the data in these tables is dependent on the licenses you have. Readers should have basic knowledge of Microsoft SQL Server 2016.

Table Name Conventions

In Quantitative Analytics, database tables are grouped by name. Generally, the first few letters of the table name refer to the data vendor or licensing group. For example, all tables that begin with **GPRC*** are **IDC Global Pricing** tables, tables beginning with **PRC*** are **IDC United States Pricing** tables, and tables beginning with **CPRC*** are **IDC Canadian Pricing** tables.

Accessing Interactive Data Corporation (IDC) Documentation

This document describes database organization within LSEG Quantitative Analytics, but it is not intended to replace IDC documentation. You may also want to refer to documentation provided for IDC Pricing by the Interactive Data Corporation. IDC data fields are described in detail in the IDC Interactive Data Pricing and Reference Data Reference Guide.

If you have an IDC data license but do not have access to IDC documentation, contact IDC Customer Support at: <http://www.ftinteractivedata.com>

Pervasive and Oracle

This document is specific to Microsoft SQL Server 2016. If you are accessing the data directly through the Pervasive database, you may encounter slight differences in index names and data types. Please note that references to Pervasive and Actian are synonymous.

If you are accessing the data through Oracle, note that field names that correspond to Oracle reserved words are appended with an underscore. For example, field names “Number”, “Synonym”, and “UID” become “Number_”, “Synonym_”, and “UID_” in Oracle.

Zero Values and Nulls

Null values are usually recorded as “NULL”. Occasionally, a table may contain a value of “-99999” or “-9999”; in these cases, there is no recorded data for that period. (It is null.) If the table contains a “0” value, the data was reported as having a “0” value.

Service and Support

[MyAccount](#) is the LSEG portal that provides a single access point for timesaving support services, along with billing, user management, and information.

Statement of Service

The [Quantitative Analytics Service Description](#) is available on the [Quantitative Analytics](#) product page at MyAccount.

Subscribe to Support Channels

You are encouraged to [subscribe](#) to the following support channels to keep informed of changes to products and data, and to be notified of any service issues or change. Please see the *Alerts and Notifications* section in the *Quantitative Analytics Service Description* available on the [Quantitative Analytics](#) product page at MyAccount for detailed instructions.

- **Change Notifications**
 - **Product Change Notifications (PCNs)** detail new, enhanced, or changed functionality, which may require your action, in products that you use.
 - **Data Notifications (DNs)** alert you to upcoming changes to real-time and historical data across all asset classes that are relevant to you.
 - **RIC Change Events** inform you of planned changes to RICs. RIC is the market level identifier key unique to LSEG used to identify securities.
- **Service Alerts**

Alert you about planned maintenance and unplanned service issues affecting your products and services, and be notified via SMS or email.

Documentation

You can access product documentation on the [Quantitative Analytics](#) product page at MyAccount.

Get Support

For support using Quantitative Analytics, please use one of the following methods:

Online

Access [Get Support](#) either via the blue [Get Support](#) button at the top right of each page or by selecting *Get Support* located under *Help and Support* on the left navigation pane at MyAccount.

From the *Get Support* page, choose *Get Product and Content Support* and then select the appropriate category from the next page. Complete the request making sure to include the following:

- Under Product, select Quantitative Analytics from the dropdown list.
- In the **How can we help you?** text box, include the following information:
 - Content set name (i.e. Worldscope)

- Date applicable to a content inquiry
- Table names and relevant fields
- Security code (i.e. QA-ID, PermID, Sedol, InfoCode, etc.)
- Script used to generate the output
- Any other supporting detail

Telephone

Region	Telephone	Options
AMERS	+01 866 427 8390	Option 1 – Product Support Option 2 – Technical Support

APAC	+65 6403 7436	

Feedback

We invite your comments, corrections, and suggestions about this document: access the [Feedback](#) option under [Get Support](#) at MyAccount. Your feedback helps us continue to improve our user assistance.

Your Personal Information

LSEG is committed to the responsible handling and protection of personal information. We invite you to review our [Privacy Statement](#), which describes how we collect, use, disclose, transfer, and store personal information when needed to provide our services and for our operational and business purposes.

2. IDC North American Pricing Schema: Overview

Specify Database Ownership

Tables are entered under two separate owner names. Most United States pricing tables (PRC*) are under database owner "prc." All other tables, including Canadian Pricing (CPrc *), are under the default owner "dbo."

To ensure accuracy, structure your queries in this format: database.owner.tablename.

For example: TRQAdata.prc.prcadj.

Legacy Tables

The following tables have been replaced as described.

Legacy Table	Replaced by
dbo.PrcAdj	prc.PrcAdj and dbo.CPrcAdj
dbo.PrcAdr	prc.PrcAdr and dbo.CPrcAdr
dbo.PrcChg	prc.PrcChg and dbo.CPrcChg
dbo.PrcCur	prc.PrcCur
dbo.PrcDiv	prc.PrcDiv and dbo.CPrcDiv
dbo.PrcDiv2	prc.PrcDiv2 and dbo.CPrcDiv2
dbo.PrcDly	prc.PrcDly and dbo.CPrcDly
dbo.PrcDly2	prc.PrcDly and dbo.CPrcDly
dbo.PrcEps	prc.PrcEps and dbo.CPrcEps (these tables have been discontinued)
dbo.PrcExc	prc.PrcExc and dbo.CPrcExc
dbo.PrcExc2	prc.PrcExc and dbo.CPrcExc
dbo.PrcIdx	prc.PrcIdx and dbo.CPrcIdx
dbo.PrcInd	prc.PrcInd and dbo.CPrcInd
dbo.PrcInfo2	prc.PrcInfo and dbo.CPrcInfo
dbo.PrcInfo3	prc.PrcInfo and dbo.CPrcInfo
dbo.PrcIsr	prc.PrcIsr (Refer to the Database Schema for LSEG Quantitative Analytics Core Tables document posted on the LSEG Quantitative Analytics product page at MyAccount)
dbo.PrcIss	prc.PrcIss (Refer to Database Schema for LSEG Quantitative Analytics Core Tables document posted on the LSEG Quantitative Analytics product page at MyAccount)
dbo.Prcmap2	SecMapX (Refer to the Database Schema for LSEG Quantitative Analytics Core Tables document posted on the LSEG Quantitative Analytics product page at MyAccount)
dbo.PrcMcr	prc.PrcMcr and dbo.CPrcMcr
dbo.PrcScChg	prc.PrcScChg and dbo.CPrcScChg
dbo.Prcscchg3	prc.PrcScChg and dbo.CPrcScChg
dbo.Prcsdlchg	prc.Prcsdlchg and dbo.CPrcsdlchg
dbo.PrcShr	prc.PrcShr and dbo.CPrcShr
dbo.Prctkchg	prc.Prctkchg and dbo.CPrctkchg
dbo.PrcVol	prc.PrcVol and dbo.CPrcVol
dbo.PrcVol2	prc.PrcVol and dbo.CPrcVol

Security Mapping and Issue Information

Tables enabling security mapping, and containing information on SEDOL changes, exchange codes, and issues and issuers are described in the [Database Schema for LSEG Quantitative Analytics Core Tables](#) document posted on the LSEG Quantitative Analytics product page at [MyAccount](#).

3. IDC North American Pricing Schema: Canadian Pricing Data

dbo.CPrcAdj: Canadian Pricing Adjustment

This table contains capital actions adjustment factors for Canadian equities. Use this table to adjust historical prices for splits and spin-offs.

Update Cycle: Daily

Adjusted: Yes

Indexes		Index Fields	
pkey_CPrcAdj (Clustered)		Code, AdjType, StartDate	
Field	Type	Nullable	Description
Code	int	N	Code is the primary link across all CPrc* tables
AdjType	smallint	N	AdjType can be: split adjustment factor (1), or split and spin-off adjustment factor (2).
StartDate	smalldatetime	N	StartDate is the effective date of the change.
EndDate	datetime	Y	EndDate is the last date before the change.
Factor	float	Y	Factor is the multiplier to use with the previous price to make the adjustment.

dbo.CPrcAdr: Canadian ADR Ratios

This table contains ADR ratios for depository receipt securities that trade at a ratio other than 1:1 in their home market. Use this data to adjust shares outstanding for depository receipts that use a ratio when listed on a non-home exchange.

Update Cycle: Daily

Adjusted: Yes

Indexes		Index Fields	
pkey_CPrcAdr (Clustered)		Code, Date_	
Field	Type	Nullable	Description
Code	int	N	Code is the primary link across all CPrc* tables.
Date_	smalldatetime	N	Date_ is the expiration date on which the ratio takes effect.
Ratio	float	Y	Ratio is a divisor for shares outstanding. Cross-reference Ratio with prc.PrcShr and apply the ratio to shares outstanding for the specified time period. The Ratio is a cumulative factor. Note that many ADRs have more than one divisor throughout their history.

dbo.CPrcChg: Canadian CUSIP Change History

This table contains historical CUSIP change information for Canadian equities. If a security has more than one CUSIP assigned, the old CUSIP can be found in this table.

Update Cycle: Daily

Adjusted: N/A

Indexes	Index Fields
pkey_CPrcChg (Clustered)	Code, Date_
CPrcChg_Cusip	Cusip, Date_, Code

Field	Type	Nullable	Description
Code	int	N	Code is the primary link across all CPrc* tables.
Date_	smalldatetime	N	Date_ is the first date for which the CUSIP change in question applies. The CUSIP initialization date for the Pricing universe is January 1, 1960. Subsequent changes reflect the expiration date of the change.
Cusip	varchar(8)	Y	Cusip is the new or existing CUSIP.

dbo.CPrcDiv: Canadian Dividend Information

This table contains historical dividend and capital action information for Canadian securities, including items such as exdate and rate. This table is supplemented by [dbo.CPrcDiv2](#).

Update Cycle: Daily

Adjusted: No

Indexes	Index Fields
pkey_CPrcDiv (Clustered)	Code, SeqCode
CPrcDiv_Code	Code, ExDate, SeqCode
CPrcDiv_CodeDiv	Code, DivType, ExDate, SeqCode

Field	Type	Nullable	Description
Code	int	N	Code is the primary link across all CPrc* tables.
SeqCode	int	N	SeqCode is the TRQA unique identifier for each dividend record.
ExDate	smalldatetime	Y	ExDate is the ex-dividend date. The ex-dividend date is the date on and after which security transactions are generally not eligible for the income payment. If not available, it is nine-filled.
PayDate	smalldatetime	Y	PayDate is the date declared by a company on which a payment is to be made to stockholders, or on which a split occurs.
RecDate	smalldatetime	Y	RecDate is the record date for the dividend.
AnnDate	smalldatetime	Y	AnnDate is the announced date of the dividend, or the date on which the corporation or fund declared a split.
PayType	smallint	Y	PayType cross-references with dbo.PrcCode2 where PayType = PrcCode2.Code and PrcCode2.Type_ = 3.
SuppType	smallint	Y	SuppType_ is the supplemental payment type code. SuppType_ cross-references with dbo.PrcCode2 where SuppType = PrcCode2.Code and PrcCode2.Type_ = 4.
DivType	smallint	Y	DivType can be a: Non-cash dividend (0) Cash dividend (1) Split (2)

Field	Type	Nullable	Description
CurrCode	smallint	Y	CurrCode is a currency code. CurrCode can be: Unknown currency, paired with PayType 9 (currency other than US or Canadian) (-1) No currency conversion is necessary (0) Currency conversion is applicable (1) For all other values, cross-reference CurrCode with prc.PrcCur . Code.
Rate	float	Y	Rate is given in local currency and is unadjusted.
CCFactor	float	Y	CCFactor is the currency conversion factor. If CCFactor is less than or greater than one, the data is denominated in a currency other than CAD. The factor represents the spot rate on the trading date.
Currency_	varchar(3)	Y	Currency_ returns the three-letter abbreviation for a currency.
SpecFld	varchar(80)	Y	SpecFld contains the gross rate to an ADR/ORD basis of 1.000 (applicable to non-U.S. denominated stocks). For example: 00000007031000 0001000 = Gross rate: 0.7031000, ADR/ORD basis: 1.000000000070312500000000000 0001000 = Gross rate: 0.7031250, Fee: 0.00000, ADR/ORD basis: 1.000

dbo.CPrcDiv2: Canadian Dividend Supplemental Information

This table contains additional information for dividend information provided in [dbo.CPrcDiv](#). Such items may include revision indicators, whether the dividend is subject to approval and by whom, and additional tax information. Use this table to modify dividend history if necessary.

Update Cycle: Daily

Adjusted: No

Indexes	Index Fields
pkey_CPrcDiv2 (Clustered)	Code, SeqCode
CPrcDiv2_Code	Code, ExDate, SeqCode
CPrcDiv2_CodeDiv	Code, DivType, ExDate, SeqCode

Field	Type	Nullable	Description
Code	int	N	Code is the primary link across all CPrc* tables.
SeqCode	int	N	SeqCode is the TRQA unique identifier for each dividend record.
ExDate	smalldatetime	Y	ExDate is the ex-dividend date. The ex-dividend date is the date on and after which security transactions are generally not eligible for the income payment. If not available, it is nine-filled.
DivType	smallint	Y	DivType can be a: Non-cash dividend (0) Cash dividend (1) Split (2)
DTCReinvCode	smallint	Y	DTCReinvCode dividend reinvestment code can be either 0 (does not qualify) or 1 (does qualify).
STAFlag	char(1)	Y	STAFlag is described in the STAFlag section on page 12.
TaxStatCode	char(1)	Y	TaxStatCode is described in the TaxStatCode section on page 12.
ReinvPlanCode	smallint	Y	ReinvPlanCode is the dividend reinvestment plan code. ReinvPlanCode can be: None (0) Reinvestment plan is offered (1) Reinvestment plan is offered at a discount (2)
PayFreqCode	varchar(3)	Y	PayFreqCode is described in the PayFreqCode section on page 13.
IAD	float	Y	IAD is the Indicated Annual Dividend. It is the IDC approximate indicator of dividend performance.

Field	Type	Nullable	Description
IADFootnote	char(1)	Y	IADFootnote is described in the IADFootnote section on page 14.
AnnEntryCode	smallint	Y	AnnEntryCode is described in the AnnEntryCode section on page 14.
LateRevCode	smallint	Y	LateRevCode is the late/revision code. LateRevCode can be: Does not apply (0) Late announcement (1) Revision (2) Revision after late announcement (3)
TransferCode	char(1)	Y	TransferCode can be: New York City (0) Number of days from New York by first class mail (1-4) Unknown (9) Foreign transfer agent (-)
MFDatInd	smallint	Y	MFDatInd is defined as the Dividend Declaration Code. As the Dividend Declaration Code MFDatInd indicates: Dividend paid at opening of business, for mutual funds (0) Dividend paid at close of business, for mutual funds (1) Dividends declared daily, for mutual funds (2) Not quoted ex by exchange; ex-date field contains effective date, if available (3) Does not apply (9)
UITPFAnnFlag	smallint	Y	UITPFAnnFlag is the UIT preliminary/final announcement flag. UITPFAnnFlag can be: Preliminary announcement (1) Final announcement (2) Does not apply (9)
SuppType2	smallint	Y	SuppType2 is the second supplemental payment type code. SuppType2 cross-references with dbo.PrcCode2 where SuppType2 = PrcCode2.Code and PrcCode2.Type_ = 4.
RevInd1	char(1)	Y	RevInd1 is the first revision indicator. This field identifies revised fields in the record.
RevInd2	char(1)	Y	RevInd2 is the second revision indicator. This field identifies revised fields in the record.
RevInd3	char(1)	Y	RevInd3 is the third revision indicator. This field identifies revised fields in the record.
TaxPct	float	Y	TaxPct is the tax percentage of the foreign tax rate paid by U.S. residents on dividends issued by non-U.S. companies. TaxPct is nine-filled when not available.
DueBillOnDate	smalldatetime	Y	DueBillOnDate is the business date, after the record date, on which all physical security receipts/deliveries must be accompanied by a due bill.
DueBillOffDate	smalldatetime	Y	DueBillOffDate is the date on or after which presented due bills are to be paid.

STAFlag

STAFlag is the Subject-to-Approval flag. STAFlag can be:

Code	Description
A	Subject to shareholder approval
B	Subject to SEC approval
C	Both A and B apply
D	Dividend approved by shareholders
E	Dividend or stock distribution approved by SEC
F	Both D and E apply

Code	Description
G	Dividend or stock distribution rejected
9	N/A

TaxStatCode

TaxStatCode is the tax status code. TaxStatCode can be:

Code	Description
A	Fully taxable
B	U.S. withholding tax not required from non-resident aliens
C	U.S. dividend withholding tax required from non-resident aliens on total amount
D	US dividend withholding tax from non-resident aliens not required on total amount
E	Tax-free distribution not subject to foreign withholding
F	Reclaim entitlement
G	Rate includes foreign tax credit
H	Rate excludes foreign tax credit
I	Undistributed capital gains/TBD
J	Return of capital
K	Return of capital and income that is partially-taxable
L	Tax exempt
M	Royalty income distribution
N	Includes foreign currency gains
P	Partially tax exempt
R	Non-taxable event
S	Does not apply
T	Taxable as interest
0	A and N apply
1	A plus B
2	A plus C
3	A plus D
4	A plus E
5	A plus F
6	A plus G
7	A plus H
8	A plus I
9	A plus M

PayFreqCode

PayFreqCode is the dividend payment frequency code. PayFreqCode can be:

Code	Description
1	Annual
2	Semi-annual
3	Quarterly
4	Monthly
009	One payment per year
00A	Two payments per year
00B	Three payments per year

Code	Description
00C	Four payments per year
00D	Twelve payments per year
E	No set schedule
[blank]	Not available
00M	Sixteen payments per year
A01-A09	Indicates payment cycle of every one through nine days
010-366	indicates payment cycle of every 10 through 366 days

IADFootnote

IADFootnote is the indicated annual dividend footnote. IADFootnote can be:

Code	Description
A	IAD equals the cash dividend rate multiplied by the dividend payment frequency
B	Same as A, and extra dividend was paid but not included
C	IAD is the sum of regular cash payments for the past year
D	Same as C, and extra dividend was paid but not included
E	IAD is the estimated long-term return of UIT supplied by sponsor
F	No IAD, stock distributions only during past year
G	No IAD, capital gains distributions only during past year
H	Initial dividend payment, IAD is dividend rate of initial dividend
I	IAD is sum of less than a full year of payments
J	Preferred issue with fixed annual rate
K	No IAD, dividend was omitted or rescinded
L	IAD adjusted for split or dividend
M	IAD is annualized average of less than a year of history
N	IAD was calculated based on current yield provided by UIT sponsor
Z	UIT IAD temporarily unavailable
9	Does not apply

AnnEntryCode

AnnEntryCode is the announcement entry code. AnnEntryCode can be:

Code	Description
0	No announcement
1	First announcement
2	Same as previous announcement
3	Revision of previous announcement
4	Projected registered bond interest payment
5	Bond matured, not called
7	First announcement of called bond
8	Revision of previous called bond announcement
9	Not available or not applicable

dbo.CPrcDly: Canadian Composite Pricing

This table contains daily equity composite pricing information, including the open and close prices. Use this table to find the value of an equity by date for a composite value. All data fields are stored in local currency.

Update Cycle: Daily

Adjusted: No

Indexes	Index Fields
pkey_CPrcDly (Clustered)	Code, Date_
CPrcDly_Date_	Date_, Code, Open_, High, Low, Close_, Volume, TotRet, CCFactor

Field	Type	Nullable	Description
Code	int	N	Code is the primary link across all CPrc* tables.
Date_	smalldatetime	N	Date_ is the date for which the pricing applies.
Open_	real	Y	Open_ is the first price at which a security traded on a given date.
High	real	Y	High is the highest price at which a security traded on a given date.
Low	real	Y	Low is the lowest price at which a security traded on a given date.
Close_	real	Y	Close_ is the price at the close of the market. For stocks that do not trade on a given trading day, Close_ is an average of Bid and Ask.
Volume	real	Y	Volume is the number of shares traded on the specified date, or within the specified period.
TotRet	real	Y	TotRet is the gross total return as a percent of the first close price. It is an index starting at 100 from the IPO date or, if the company history extends beyond the date the data has been stored, it is 100 from the point at which the data starts in the TRQA database (January 2, 1975). TotalRet takes into account price movement, dividends, spin-offs, and takeovers.
CCFactor	real	Y	CCFactor is the currency conversion factor. Prices provided in this table are in CAD and to convert them to USD, multiply by the CCFactor.
Flags	tinyint	Y	Flags have been discontinued and should not be used.

dbo.CPrcEps: Canadian Earnings Information

This table has been discontinued. It is documented for your convenience, but using the data in this table is not recommended.

This table contains earnings per share data. Use the information in this table to determine historical earnings per share.

Update Cycle: Daily

Adjusted: No

Indexes	Index Fields
pkey_CPrcEps (Clustered)	Code, Date_

Field	Type	Nullable	Description
Code	int	N	Code is the primary reference across all CPrc* tables.
Date_	smalldatetime	N	Date_ is the date of the price.
EpsMon	smallint	Y	EpsMon is the last month in an annual earnings per share period.
Eps	float	Y	Eps is the basic or diluted earnings per share for the most recent twelve months.
EarnInd	varchar(1)	Y	EarnInd is described in the EarnInd section on page 16.
IADModifier	smallint	Y	IADModifier identifies the manner in which the value in the IAD field must be adjusted to arrive at a final value. IADModifier can be: Regular rate/no adjustment (0) Add \$10 to the IAD (1)

Field	Type	Nullable	Description
			Add \$20 to the IAD (2) Multiply the IAD by 10 (7) Multiply the IAD by 100 (8) Not available or not applicable (9)
IAD	float	Y	IAD is the Indicated Annual Dividend. It is the IDC approximate indicator of dividend performance.

EarnInd

EarnInd is the multiplier used with the Eps field to arrive at the final Eps value. EarnInd can be:

Code	Description
A	10 * earnings
B	100 * earnings
C	1,000 * earnings
-	-1 * earnings
L	-10 * earnings
M	-100 * earnings
N	- 1,000 * earnings
9	Not available or not applicable
[blank]	1 * earnings

dbo.CPrcExc: Canadian Primary Exchange Pricing

This table contains pricing for the primary exchange of a given security. All data fields are stored in local currency. Use this table to locate the primary exchange pricing pre-year 2000. If primary exchange data is not in this table, then the composite exchange is the primary exchange. Exchange codes are available in [dbo.CPrcScChg](#).

Update Cycle: Daily

Adjusted: No

Indexes	Index Fields
pkey_CPrcExc (Clustered)	Code, Date_

Field	Type	Nullable	Description
Code	int	N	Code is the primary reference across all CPrc* tables.
Date_	smalldatetime	N	Date_ is the date for which the pricing applies.
Open_	real	Y	Open_ is the first price at which a security traded on a given date.
High	real	Y	High is the highest price at which a security traded on a given date.
Low	real	Y	Low is the lowest price at which a security traded on a given date.
Close_	real	Y	Close_ is the price at the close of the market. For stocks that do not trade on a given trading day, Close_ is an average of Bid and Ask.
Bid	real	Y	Bid is the most recent bid price.
Ask	real	Y	Ask is the most recent ask price.
Volume	real	Y	Volume is the number of shares traded on the specified date, or within the specified period.
CCFactor	real	Y	CCFactor is the currency conversion factor. If CCFactor is less than or greater than one, the data is denominated in a currency other than CAD. The factor represents the spot rate on the trading date.
Flags	tinyint	Y	Flags have been discontinued and should not be used.

dbo.CPrclIdx: Canadian Index Closes

This table contains pricing data for Canadian indexes. This data can also be found in the Index table `dbo.idxdaily`.

Update Cycle: Daily

Adjusted: No

Indexes	Index Fields
pkey_CPrclIdx (Clustered)	Code, Date_
CPrclIdx_Date_	Date_, Code, Close_

Field	Type	Nullable	Description
Code	int	N	Code is the primary reference across all CPrcl* tables. To determine the multiplier (primarily for currencies), cross-reference Code with dbo.CPrclInfo .Issue where CPrclIdx.Code = CPrclInfo.Code.
Date_	smalldatetime	N	Date_ is the date for which the pricing applies.
Close_	float	Y	Close_ is the price at the close of the market. For stocks that do not trade on a given trading day, Close_ is an average of Bid and Ask.

dbo.CPrclInd: Canadian Security Indicators

This table returns security indicator information.

This table is not maintained, and data may be unreliable. Information on this table is provided as a convenience; however, using this table is not recommended.

Update Cycle: Daily

Adjusted: No

Indexes	Index Fields
pkey_CPrclInd (Clustered)	Code, Date_

Field	Type	Nullable	Description
Code	int	N	Code is the primary reference across all CPrcl* tables.
Date_	smalldatetime	N	Date_ is the date for which the pricing applies.
ExpDate	smalldatetime	Y	ExpDate is the expiration date or ending date for options, futures, and warrants and rights.
AdjFactor	float	Y	AdjFactor is the adjustment factor used to adjust all per share data for stock splits, dividends, and other capitalization changes. The adjustment factors apply to the time periods prior to the capitalization change, so that the data reflect the current share units.
MarginCode	varchar(1)	Y	MarginCode is described in the MarginCode section on page 18.
EvalDate	smalldatetime	Y	EvalDate is the date based on the exchange-specific pricing for the last day the security traded or quoted on its primary exchange.
IssueType	varchar(1)	Y	IssueType is described in the IssueType section on page 18.
TradeType	varchar(1)	Y	TradeType is described in the TradeType section on page 18.
IssueStatus	varchar(1)	Y	IssueStatus indicates the status of a security, as assigned by IDC. IssueStatus cross-references with dbo.PrcCode2 where <code>ascii(IssueStatus) = PrcCode2.Code</code> and <code>PrcCode2.Type_ = 5</code> .
SPCode	varchar(1)	Y	SPCode is described in the SPCode section on page 19.

MarginCode

MarginCode identifies whether the security is marginable and whether the security is DTC-eligible. MarginCode can be:

Code	Description
0	Exchange-listed marginable
1	Not marginable
2	Marginable OTC
A	Exchange-listed marginable, DTC, CNS
B	Exchange-listed marginable, DTC
D	Exchange-listed marginable, not DTC/CNS eligible
E	Not marginable OTC, DTC
F	Not marginable OTC, DTC, CNS
H	Not marginable OTC, not DTC/CNS eligible
I	Marginable OTC, DTC, CNS
J	Marginable OTC, DTC
L	Marginable OTC, not DTC/CNS eligible
9	No information available

IssueType

IssueType defines the issue type of the security (assigned by IDC). IssueType can be:

Code	Description
0	Common or Ordinary
1	Preferred or Preference
2	Warrant or Right
4	Unit
7	Mutual or Investment Trust Fund
8	Certificate
A	Market Index
F	American Depositary Receipt (ADR)
G	Convertible Preferred
R	Farmers Home Loan Administration
%	Exchange Traded Funds (ETF)

TradeType

TradeType provides additional information about the trade data reported for the security. TradeType can be:

Code	Description
0	Regular: high, low, close, volume
1	Ex-Distribution/Dividend
4	Multiply volume by 100
5	Multiply volume by 10
8	Untraded; with bid, ask, or bid/ask quotes (Volume may be present for NASDAQ Securities).
9	Untraded; with bid, ask, or bid/ask quotes (Previous value, if any, are retained).
H	Trading holiday, last available price
Z	No active pricing data, but called bond, dividend, registered bond interest payment, and stockholder meeting data are available.

SPCode

SPCode is the Standard & Poor's Common and Preferred Stock Ranking or Rating Code. It is a ranking of common stocks, considering the growth and stability of earnings and dividends. SPCode can be:

Common Stock Codes

Code	Description
A	A+
B	A
C	A-
D	B+
E	B
F	B-
G	C
H	D
Y	In Liquidation
Z	Not ranked
[blank]	Not available

Preferred Stock Codes

Code	Description
A	AAA
B	AA+
C	AA
D	AA-
E	A+
F	A
G	A-
H	BBB+
I	BBB
J	BBB-
K	BB+
L	BB
M	BB-
N	B+
O	B
P	B-
U	CCC+
Q	CCC
V	CCC-
R	CC
S	C
T	D, non-paying, issuer in default
Y	Called
Z	Not Rated
[blank]	Not Available

dbo.CPrcInfo: Canadian Security Description Information

This table contains key security information, including security type, exchange traded, and ticker. Use the data in this table to describe and define a security.

Update Cycle: Daily

Adjusted: N/A

Indexes	Index Fields
pkey_CPrcInfo (Clustered)	Code
CPrcInfo_Cusip	Cusip
CPrcInfo_Issuer	Issuer
CPrcInfo_Sedol	Sedol
CPrcInfo_Ticker	Ticker

Field	Type	Nullable	Description
Cusip	varchar(8)	Y	Cusip is the new or existing CUSIP.
Issuer	varchar(30)	Y	Issuer is the name of the company that issued the security.
Issue	varchar(20)	Y	Issue is a text description of the security type. The text description is non-uniform and non-standard. Use SecType for classifying the stock as common, preferred, warrant, ADR, etc.
Ticker	varchar(12)	Y	Ticker represents BaseTicker + Group_ + Series, concatenated (blank spaces removed).
Sedol	varchar(6)	Y	Sedol is the Stock Exchange Daily Official List (SEDOL) number assigned to a security. If the table contains SEDOL change data, Sedol is the active SEDOL for the security during the period between the start and end date.
Country	varchar(2)	Y	Country returns the two-letter ISO country code for the issuer's country of incorporation. It cross-references with prc.PrcCur where Country = PrcCur.Country for the country name.
CurrEx	varchar(1)	Y	CurrEx is the current trading location or security group. It cross-references with dbo.PrcCode2 where ascii(CurrEx) = PrcCode2.Code and PrcCode2.Type_ = 2.
HistEx	varchar(1)	Y	HistEx is the historical location. It cross-references with dbo.PrcCode2 where ascii(HistEx) = PrcCode2.Code and PrcCode2.Type_ = 2.
SecType	varchar(1)	Y	SecType is a code representing the security type. It cross-references with dbo.PrcCode2 where ascii(SecType) = PrcCode2.Code and PrcCode2.Type_ = 1.
Status	varchar(1)	Y	Status indicates the status of a security, assigned by IDC. It cross-references with dbo.PrcCode2 where ascii(Status) = PrcCode2.Code and PrcCode2.Type_ = 5.
SIC	smallint	Y	SIC is the SIC code that classifies a company by its primary business activity. It cross-references with dbo.PrcCode2 where SIC = PrcCode2.Code and PrcCode2.Type_ = 7.
Code	int	N	Code is the primary link across all CPrc* tables.
PrimaryFlag	smallint	Y	PrimaryFlag is a flag for dually listed stocks that indicates the order in which a security is listed. A value of 1 indicates the security is listed first; a value of 0 indicates the security is not listed first.
LastUpdate	smalldatetime	Y	LastUpdate indicates the last time the information was updated.

dbo.CPrcMcr: Canadian Market Cap Ranks

This table contains the ranking of securities by market capitalization. Use the data in this table to find where a security ranks by market capitalization when compared to other stocks.

Update Cycle: Daily

Adjusted: Yes

Indexes	Index Fields
pkey_CPrcMcr (Clustered)	Code, Date_

Field	Type	Nullable	Description
Code	int	N	Code is the primary link across all CPrc* tables.
Date_	smalldatetime	N	Date_ is the first date for which ranking is valid.
RankAll	int	Y	RankAll is computed once a month and includes ADRs.
RankStk	int	Y	RankStk is Canadian-based only and does not include ADR; it is computed once a month.

dbo.CPrcScChg: Canadian Historical Ticker, CUSIP, and Name Changes

This table contains change records for security identifiers. Use the data in this table to find non-current identifiers.

Update Cycle: Daily

Adjusted: N/A

Indexes	Index Fields
pkey_CPrcScChg (Clustered)	Code, StartDate
CPrcScChg_Cusip	Cusip, StartDate, Code
CPrcScChg_Sedol	Sedol, StartDate, Code
CPrcScChg_Ticker	Ticker, StartDate, Code

Field	Type	Nullable	Description
Code	int	N	Code is the primary link across all CPrc* tables.
StartDate	smalldatetime	N	StartDate is the effective date of the change.
EndDate	smalldatetime	Y	EndDate is the last date before the change.
Cusip	varchar(8)	Y	Cusip is the new or existing CUSIP.
Ticker	varchar(12)	Y	Ticker represents BaseTicker + Group_ + Series, concatenated (blank spaces removed).
Sedol	varchar(6)	Y	Sedol is the Stock Exchange Daily Official List (SEDOL) number assigned to a security. If the table contains SEDOL change data, Sedol is the active SEDOL for the security during the period between the start and end date.
Issuer	varchar(40)	Y	Issuer is the name of the company that issued the security.
FullTicker	varchar(6)	Y	FullTicker represents BaseTicker + Group_ + Series. BaseTicker reserves positions 1 through 4, Group_ reserves position 5, and Series reserves position 6.
BaseTicker	varchar(4)	Y	BaseTicker is the base ticker without any Group_ or Series appendage.
Group_	varchar(1)	Y	Group_ cross-references with dbo.PrcCode2 where <code>ascii(Group_) = PrcCode2.Code</code> and <code>Type_ = 13</code> (for listed equities) or <code>Type_ = 14</code> (for non-listed equities).
Series	varchar(1)	Y	Series cross-references with dbo.PrcCode2 where <code>ascii(Series) = PrcCode2.Code</code> and <code>Type_ = 15</code> (for listed equities) or <code>Type_ = 16</code> (for non-listed equities).
Exchange	varchar(1)	Y	Exchange is described in the Exchange section on page 22.

Exchange

Exchange is used to determine listed or non-listed when looking up Group_ and Series descriptions. Exchange can be any of the following.

The exchange list is fluid and can and will change in the future if there are exchange re-names or new exchanges added.

Code	Description
%	Pink Sheet
1	Other Equity
A	New York Stock Exchange equity
B	NYSE Market (Formerly NYSE AMEX, formerly American SE)
C	Philadelphia Stock Exchange
D	Chicago Stock Exchange
E	NYSE Arca (formerly Archipelago/Pacific Exchange)
F	NASDAQ Stock Market Equity (NASDAQ NMS, Nasdaq Market Centers)
G	Market indices
H	NASDAQ Small Cap (\$ in full ticker-OTC Bulletin Board)
I	Mutual and Money Market Funds
J	Toronto Stock Exchange
K	Montreal Stock Exchange
R	Chicago Board Options Exchange option, equity or bond
S	BATS Equities and Options Exchange
T	Nasdaq OMX BX (formerly Boston)
U	Unlisted Evaluated Equity
V	TSX Venture Exchange
Z	The Investors Exchange

dbo.CPrsdlchg: Canadian SEDOL Changes

This table contains historical SEDOLS assigned to a security. Use the data in this table to find an old SEDOL.

Update Cycle: Daily

Adjusted: N/A

Indexes	Index Fields
pkey_CPrsdlchg (Clustered)	Code, StartDate
CPrsdlchg_Sedol	Sedol, StartDate, Code

Field	Type	Nullable	Description
Code	int	N	Code is the primary link across all CPrc* tables.
StartDate	smalldatetime	N	StartDate is the effective date of the change.
EndDate	smalldatetime	Y	EndDate is the last date before the change.
Sedol	varchar(6)	Y	Sedol is the Stock Exchange Daily Official List (SEDOL) number assigned to a security. If the table contains SEDOL change data, Sedol is the active SEDOL for the security during the period between the start and end date.

dbo.CPrcShr: Canadian Shares Outstanding

This table contains shares outstanding data for a security over time. Use the data in this table to find current or historical shares outstanding.

Update Cycle: Daily

Adjusted: No

Indexes	Index Fields
pkey_CPrcShr (Clustered)	Code, Date_
CPrcShr_Date_	Date_, Code, Shares

Field	Type	Nullable	Description
Code	int	N	Code is the primary link across all Prc* tables.
Date_	smalldatetime	N	Date_ is the date associated with the shares outstanding.
Shares	float	Y	Shares are the unadjusted shares outstanding. Note: Shares are stored on a monthly basis up to December 31, 2000, unless a split occurred mid-month. After December 31, 2000, shares are stored on a daily basis. For example, on May 27, 1999 IBM has an entry of 1841302016. May 27, 1999 is considered a mid-month split prior to December 31, 2000; therefore, the split factor was applied to the prior month's shares 920651008 to compute the value for May 27, 1999.

dbo.CPrctkchg: Canadian Historical Ticker Changes

This table contains historical ticker symbols and the dates for which the tickers are valid. Use the data in this table to find a security using an old ticker.

Update Cycle: Daily

Adjusted: N/A

Indexes	Index Fields
pkey_CPrctkchg (Clustered)	Code, StartDate
CPrctkchg_Ticker	Ticker, StartDate, Code

Field	Type	Nullable	Description
Code	int	N	Code is the primary link across all Prc* tables.
StartDate	smalldatetime	N	StartDate is the effective date of the change.
EndDate	smalldatetime	Y	EndDate is the last date before the change.
Ticker	varchar(12)	Y	Ticker represents BaseTicker + Group_ + Series, concatenated (blank spaces removed).

dbo.CPrcVol: Canadian Specialty Volume Series

This table contains a breakdown of a given day's trading volume and related metrics. Use the data in this table to assess trade action and volume weighted average trade value for a given day.

Update Cycle: Daily

Adjusted: No

Indexes	Index Fields
pkey_CPrcVol (Clustered)	Code, Date_
CPrcVol_Date_	Date_, Code, Bid, Ask, Vwap, AvgTrade, BlockVol, NumTrades, CCFactor

Field	Type	Nullable	Description (Data is stored in local currency)
Code	int	N	Code is the primary link across all CPrc* tables.
Date_	smalldatetime	N	Date_ is date associated with the volume and trade entry.
Bid	real	Y	Bid is the most recent bid price.
Ask	real	Y	Ask is the most recent ask price.
Vwap	real	Y	Vwap is the Volume Weighted Average price. This price is based on regular trading volume as well as pre-market and post-market volume, and it is adjusted for cancels and corrections.
AvgTrade	real	Y	AvgTrade is the average number of shares per NumTrades.
BlockVol	real	Y	BlockVol is the composite block volume.
NumTrades	real	Y	NumTrades is the composite number of trades executed.
CCFactor	real	Y	CCFactor is the currency conversion factor. If CCFactor is less than or greater than one, the data is denominated in a currency other than CAD. The factor represents the spot rate on the trading date.
Flags	tinyint	Y	Flags have been discontinued and should not be used.

dbo.CSplitAnn: Canadian Split Dates and Rates

Use this table to retrieve split dates and rates.

Update Cycle: Daily

Adjusted: No

Indexes	Index Fields
pkey_CSplitAnn (Clustered)	Code, AnnDate
CSplitAnn_anndatecode	AnnDate, Code
CSplitAnn_codeexdate	Code, ExDate
CSplitAnn_codepaydate	Code, PayDate
CSplitAnn_exdatecode	ExDate, Code
CSplitAnn_paydatecode	PayDate, Code

Field	Type	Nullable	Description
Code	int	N	Code is the link to dbo.CPrcInfo where Code = CPrcInfo.Code.
AnnDate	smalldatetime	N	AnnDate is the announced date of the dividend, or the date on which the corporation or fund declared a split.
ExDate	smalldatetime	Y	ExDate is the ex-dividend date. The ex-dividend date is the date on and after which security transactions are generally not eligible for the income payment. If not available, it is nine-filled.
PayDate	smalldatetime	Y	PayDate is the date declared by a company on which a payment is to be made to stockholders, or on which a split occurs.
Ratio	float	Y	Ratio is a divisor for shares outstanding. Cross-reference Ratio with prc.PrcShr and apply the ratio to shares outstanding for the specified time period. The Ratio is a cumulative factor. Note that many ADRs have more than one divisor throughout their history.

4. IDC North American Pricing Schema: United States Pricing Data

prc.PrcAdj: Pricing Adjustment

This table contains capital actions adjustment factors for United States equities. Use this table to adjust historical prices for splits and spin-offs.

Update Cycle: Daily

Adjusted: Yes

Indexes		Index Fields	
pkey_PrcAdj (Clustered)		Code, AdjType, StartDate	
Field	Type	Nullable	Description
Code	int	N	Code is the primary link across all Prc* tables.
AdjType	smallint	N	AdjType can be: split adjustment factor (1), or split and spin-off adjustment factor (2).
StartDate	smalldatetime	N	StartDate is the effective date of the change.
EndDate	datetime	Y	EndDate is the last date before the change.
Factor	float	Y	Factor is the multiplier to use with the previous price to make the adjustment.

prc.PrcAdr: Pricing ADR Ratio

This table contains ADR ratios for depository receipt securities that trade at a ratio other than 1:1 in their home market. Use this data to adjust shares outstanding for depository receipts that use a ratio when listed on a non-home exchange.

Update Cycle: Daily

Adjusted: Yes

Indexes		Index Fields	
pkey_PrcAdr (Clustered)		Code, Date_	
Field	Type	Nullable	Description
Code	int	N	Code is the primary link across all Prc* tables.
Date_	smalldatetime	N	Date_ is the date on which the ratio takes effect.
Ratio	float	Y	Ratio is a divisor for shares outstanding. Cross-reference Ratio with prc.PrcShr and apply the ratio to shares outstanding for the specified time period. The Ratio is a cumulative factor. Note that many ADRs have more than one divisor throughout their history.

prc.PrcChg: Pricing CUSIP Change History

This table contains historical CUSIP change information for United States equities. If a security has more than one CUSIP assigned, the old CUSIP can be found in this table.

Update Cycle: Daily

Adjusted: N/A

Indexes	Index Fields
pkey_PrcChg (Clustered)	Code, Date_
PrcChg_Cusip	Cusip, Date_, Code

Field	Type	Nullable	Description
Code	int	N	Code is the primary link across all Prc* tables.
Date_	smalldatetime	N	Date_ is the first date for which the CUSIP change in question is applied.
Cusip	varchar(8)	Y	Cusip is the new or existing CUSIP. Note that the CUSIP initialization date for the Pricing universe is January 1, 1960. Subsequent changes reflect the expiration date of the change.

dbo.PrcCode2: Pricing Code Descriptions

This table contains plain language descriptions for codes and symbols used throughout the IDC equity pricing tables.

Update Cycle: Daily

Adjusted: N/A

Indexes	Index Fields
pkey_PrcCode2 (Clustered)	Type_, Code

Field	Type	Nullable	Description
Type_	smallint	N	Type_ is described in the Type_ section on page 26.
Code	int	N	Code is an integer that requires translation. Refer to Type_ for translation.
Desc_	varchar(80)	Y	Desc_ provides a plain-language description for Code defined by Type_ and Code.

Type_

Type_ is (the integer codes correspond to the ASCII equivalent):

Code	Description
1	Security type description. For example, right, warrant, common, preferred, and so on.
2	Exchange description
3	Primary dividend payment type code description
4	Supplemental dividend payment type code description
5	Issue status description. For example, merged, acquired, bankrupt, and so on
6	Option Exchange name
7	Standard Industry Classification code description (SIC)
8	S&P Industry code description
9	S&P Sector code description (Sector1 and Sector2)
10	Russell Industry code description
11	Russell Sector code description
12	Global Industry Classification (GIC)
13	Listed equity group description
14	Non-listed equity group description

Code	Description
15	Listed equity series/class description
16	Non-listed equity series/class description
17	Maps IDC exchange codes to Special Dates exchange codes. For information about Special Dates tables, refer to the Database Schema for LSEG Quantitative Analytics Core Tables document posted on the LSEG Quantitative Analytics product page at MyAccount .

prc.PrcCur: Pricing Currency Information

This table contains currency description, definition, and cross-reference data when available.

Update Cycle: Daily

Adjusted: N/A

Indexes	Index Fields
pkey_PrcCur (Clustered)	Currency_
PrcCur_Code	Code
PrcCur_Country	Country, Currency_

Field	Type	Nullable	Description
Currency_	varchar(3)	N	Currency_ returns the three-letter abbreviation for a currency.
Country	varchar(2)	Y	Country returns the two-letter ISO country code for the issuer's country of incorporation. It cross-references with prc.PrcCur where Country = PrcCur.Country for the country name.
CurrDesc	varchar(40)	Y	CurrDesc states the ISO full name of the country or currency area followed by the name of the currency.
CtryDesc	varchar(40)	Y	CtryDesc returns the full name of the country or currency area.
RateCusip	varchar(8)	Y	RateCusip is the CUSIP for the trading foreign exchange.
Code	smallint	Y	Code links to prc.PrcDiv where Code = PrcDiv.CurrCode, and the code is ISO.
RateCode	int	Y	RateCode links to PrcINFO where RateCode = PrcINFO.Code. A RateCode of 0 indicates no link to historical data (data is not contained within PrcIDX).

prc.PrcDiv: Pricing Dividend Information

This table contains historical dividend and capital action information for United States securities, including items such as exdate and rate. This table is supplemented by [prc.PrcDiv2](#).

Update Cycle: Daily

Adjusted: No

Indexes	Index Fields
pkey_PrcDiv (Clustered)	Code, SeqCode
PrcDiv_Code	Code, ExDate, SeqCode
PrcDiv_CodeDiv	Code, DivType, ExDate, SeqCode

Field	Type	Nullable	Description
Code	int	N	Code is the primary link across all Prc* tables.
SeqCode	int	N	SeqCode is the TRQA unique identifier for each dividend record.
ExDate	smalldatetime	Y	ExDate is the ex-dividend date. The ex-dividend date is the date on and after which security transactions are generally not eligible for the income payment. If not available, it is nine-filled.
PayDate	smalldatetime	Y	PayDate is the date declared by a company on which a payment is to be made to stockholders, or on which a split occurs.
RecDate	smalldatetime	Y	RecDate is the date on which listed owners of a security are entitled to receive the declared dividend payment.

Field	Type	Nullable	Description
AnnDate	smalldatetime	Y	AnnDate is the announced date of the dividend, or the date on which the corporation or fund declared a split.
PayType	smallint	Y	PayType cross-references with dbo.PrcCode2 where PayType = PrcCode2.Code and PrcCode2.Type_ = 3.
SuppType	smallint	Y	SuppType_ is the supplemental payment type code. SuppType_ cross-references with dbo.PrcCode2 where SuppType = PrcCode2.Code and PrcCode2.Type_ = 4.
DivType	smallint	Y	DivType can be a: Non-cash dividend (0) Cash dividend (1) Split (2)
CurrCode	smallint	Y	CurrCode is a currency code. CurrCode can be: Unknown currency, paired with PayType 9 (currency other than US or Canadian) (-1) No currency conversion is necessary (0) Currency conversion is applicable (1) For all other values, cross-reference CurrCode with prc.PrcCur .Code.
Rate	float	Y	Rate is stored in its local currency and is unadjusted.
CCFactor	float	Y	CCFactor is the currency conversion factor. If CCFactor is less than or greater than one, the data is denominated in a currency other than USD. The factor represents the spot rate on the trading date.
Currency_	varchar(3)	Y	Currency_ returns the three-letter abbreviation for a currency.
SpecFld	varchar(80)	Y	SpecFld contains the gross rate to an ADR/ORD basis of 1.000 (applicable to non-U.S. denominated stocks). For example: 00000007031000 0001000 = Gross rate: 0.7031000, ADR/ORD basis: 1.0000000000703125000000000000 0001000 = Gross rate: 0.7031250, Fee: 0.00000, ADR/ORD basis: 1.000

prc.PrcDiv2: Pricing Dividend Information Supplemental

This table contains additional information for dividend information provided in [prc.PrcDiv](#). Such items may include revision indicators, whether the dividend is subject to approval and by whom, and additional tax information. Use this table to modify dividend history if necessary.

Update Cycle: Daily

Adjusted: No

Indexes	Index Fields
pkey_PrcDiv2 (Clustered)	Code, SeqCode
PrcDiv2_Code	Code, ExDate, SeqCode
PrcDiv2_CodeDiv	Code, DivType, ExDate, SeqCode

Field	Type	Nullable	Description
Code	int	N	Code is the primary link across all Prc* tables.
SeqCode	int	N	SeqCode is the TRQA unique identifier for each dividend record.
ExDate	smalldatetime	Y	ExDate is the ex-dividend date. The ex-dividend date is the date on and after which security transactions are generally not eligible for the income payment. If not available, it is nine-filled.
DivType	smallint	Y	DivType can be a: Non-cash dividend (0) Cash dividend (1) Split (2)
DTCReinvCode	smallint	Y	DTC dividend reinvestment code can be 0 (does not qualify) or 1 (does qualify).
STAFlag	char(1)	Y	STAFlag is described in the STAFlag section on page 12.

Field	Type	Nullable	Description
TaxStatCode	char(1)	Y	TaxStatCode is described in the TaxStatCode section on page 12.
ReinvPlanCode	smallint	Y	ReinvPlanCode is the dividend reinvestment plan code. ReinvPlanCode can be: None (0) Reinvestment plan is offered (1) Reinvestment plan is offered at a discount (2)
PayFreqCode	varchar(3)	Y	PayFreqCode is described in the PayFreqCode section on page 13.
IAD	float	Y	IAD is the Indicated Annual Dividend. It is the IDC approximate indicator of dividend performance.
IADFootnote	char(1)	Y	IADFootnote is described in the IADFootnote section on page 14.
AnnEntryCode	smallint	Y	AnnEntryCode is described in the AnnEntryCode section on page 14.
LateRevCode	smallint	Y	LateRevCode is the late/revision code. LateRevCode can be: Does not apply (0) Late announcement (1) Revision (2) Revision after late announcement (3)
TransferCode	char(1)	Y	TransferCode can be: New York City (0) Number of days from New York by first class mail (1-4) Unknown (9) Foreign transfer agent (–)
MFDatInd	smallint	Y	MFDatInd is defined as the Dividend Declaration Code. As the Dividend Declaration Code MFDatInd indicates: Dividend paid at opening of business, for mutual funds (0) Dividend paid at close of business, for mutual funds (1) Dividends declared daily, for mutual funds (2) Not quoted ex by exchange; ex-date field contains effective date, if available (3) Does not apply (9)
UITPFAnnFlag	smallint	Y	UITPFAnnFlag is the UIT preliminary/final announcement flag. UITPFAnnFlag can be: Preliminary announcement (1) Final announcement (2) Does not apply (9)
SuppType2	smallint	Y	SuppType2 is the second supplemental payment type code. SuppType2 cross-references with dbo.PrcCode2 where SuppType2 = PrcCode2.Code and PrcCode2.Type_ = 4.
RevInd1	char(1)	Y	RevInd1 is the first revision indicator. This field identifies revised fields in the record.
RevInd2	char(1)	Y	RevInd2 is the second revision indicator. This field identifies revised fields in the record.
RevInd3	char(1)	Y	RevInd3 is the third revision indicator. This field identifies revised fields in the record.
TaxPct	float	Y	TaxPct is the tax percentage of the foreign tax rate paid by U.S. residents on dividends issued by non-U.S. companies. TaxPct is nine-filled when not available.
DueBillOnDate	smalldatetime	Y	DueBillOnDate is the business date, after the record date, on which all physical security receipts/deliveries must be accompanied by a due bill.
DueBillOffDate	smalldatetime	Y	DueBillOffDate is the date on or after which presented due bills are to be paid.

prc.PrcDly: Composite Pricing

This table contains daily equity composite pricing information, including the open and close prices. Use this table to find the value of an equity by date for a composite value. All data fields are stored in local currency.

Update Cycle: Daily

Adjusted: No

Indexes	Index Fields
pkey_PrcDly (Clustered)	Code, Date_
PrcDly_Date_	Date_, Code, Open_, High, Low, Close_, Volume, TotRet, CCFactor

Field	Type	Nullable	Description
Code	int	N	Code is the primary link across all Prc* tables.
Date_	smalldatetime	N	Date_ is the date for which the pricing applies.
Open_	real	Y	Open_ is the first price at which a security traded on a given date.
High	real	Y	High is the highest price at which a security traded on a given date.
Low	real	Y	Low is the lowest price at which a security traded on a given date.
Close_	real	Y	Close_ is the price at the close of the market. For stocks that do not trade on a given trading day, Close_ is an average of Bid and Ask.
Volume	real	Y	Volume is the number of shares traded on the specified date, or within the specified period.
TotRet	real	Y	TotRet is the gross total return as a percent of the first close price. It is an index starting at 100 from the IPO date or, if the company history extends beyond the date the data has been stored, it is 100 from the point at which the data starts in the TRQA database (January 2, 1975). TotalRet takes into account price movement, dividends, spin-offs, and takeovers.
CCFactor	real	Y	CCFactor is the currency conversion factor. If CCFactor is less than or greater than one, the data is denominated in a currency other than USD. The factor represents the spot rate on the trading date.
Flags	tinyint	Y	Flags have been discontinued and should not be used.

prc.PrcEps: Pricing Earnings Information

This table has been discontinued. It is documented for your convenience, but using the data in this table is not recommended.

This table contains earnings per share data. Use the information in this table to determine historical earnings per share.

Update Cycle: Daily

Adjusted: No

Indexes	Index Fields
pkey_PrcEps (Clustered)	Code, Date_

Field	Type	Nullable	Description
Code	int	N	Code is the primary reference across all Prc* tables.
Date_	smalldatetime	N	Date_ is the date of the price.
EpsMon	smallint	Y	EpsMon is the last month in an annual earnings per share period.
Eps	float	Y	Eps is the basic or diluted earnings per share for the most recent twelve months.
EarnInd	varchar(1)	Y	EarnInd is described in the EarnInd section on page 16.
IADModifier	smallint	Y	IADModifier identifies the manner in which the value in the IAD field must be adjusted to arrive at a final value. IADModifier can be: Regular rate/no adjustment (0)

Field	Type	Nullable	Description
			Add \$10 to the IAD (1) Add \$20 to the IAD (2) Multiply the IAD by 10 (7) Multiply the IAD by 100 (8) Not available or not applicable (9)
IAD	float	Y	IAD is the Indicated Annual Dividend. It is the IDC approximate indicator of dividend performance.

prc.PrcExc: Primary Exchange Pricing

This table contains pricing for the primary exchange of a given security. All data fields are stored in local currency.

Update Cycle: Daily

Adjusted: No

Indexes	Index Fields
pkey_PrcExc (Clustered)	Code, Date_

Field	Type	Nullable	Description
Code	int	N	Code is the primary reference across all Prc* tables.
Date_	smalldatetime	N	Date_ is the date for which the pricing applies.
Open_	real	Y	Open_ is the first price at which a security traded on a given date.
High	real	Y	High is the highest price at which a security traded on a given date.
Low	real	Y	Low is the lowest price at which a security traded on a given date.
Close_	real	Y	Close_ is the price at the close of the market. For stocks that do not trade on a given trading day, Close_ is an average of Bid and Ask.
Bid	real	Y	Bid is the most recent bid price.
Ask	real	Y	Ask is the most recent ask price.
Volume	real	Y	Volume is the number of shares traded on the specified date, or within the specified period.
CCFactor	real	Y	CCFactor is the currency conversion factor. If CCFactor is less than or greater than one, the data is denominated in a currency other than USD. The factor represents the spot rate on the trading date.
Flags	tinyint	Y	Flags have been discontinued and should not be used.

prc.Prcldx: Pricing Index Closes

This table contains pricing data for United States index closes.

Update Cycle: Daily

Adjusted: No

Indexes	Index Fields
pkey_Prcldx (Clustered)	Code, Date_
Prcldx_Date_	Date_, Code, Close_

Field	Type	Nullable	Description
Code	int	N	Code is the primary reference across all Prc* tables. To determine the multiplier (primarily for currencies), cross-reference Code with PrclInfo .Issue where Prcldx.Code = PrclInfo.Code.
Date_	smalldatetime	N	Date_ is the date for which the pricing applies.
Close_	float	Y	Close_ is the price at the close of the market. For stocks that do not trade on a given trading day, Close_ is an average of Bid and Ask.

prc.PrcInd: Pricing Securities Indicators

This table returns security indicator information.

This table is not maintained and data may be unreliable. Information on this table is provided as a convenience; however, using this table is not recommended.

Update Cycle: Daily

Adjusted: No

Indexes		Index Fields	
pkey_PrcInd (Clustered)		Code, Date_	
Field	Type	Nullable	Description
Code	int	N	Code is the primary reference across all Prc* tables.
Date_	smalldatetime	N	Date_ is the date for which the pricing applies.
ExpDate	smalldatetime	Y	ExpDate is the expiration date or ending date for options, futures, and warrants and rights.
AdjFactor	float	Y	AdjFactor is the adjustment factor used to adjust all per share data for stock splits, dividends, and other capitalization changes. The adjustment factors apply to the time periods prior to the capitalization change, so that the data reflect the current share units.
MarginCode	varchar(1)	Y	MarginCode is described in the MarginCode section on page 18.
EvalDate	smalldatetime	Y	EvalDate is the date based on the exchange-specific pricing for the last day the security traded or quoted on its primary exchange.
IssueType	varchar(1)	Y	IssueType is described in the IssueType section on page 18.
TradeType	varchar(1)	Y	TradeType is described in the TradeType section on page 18.
IssueStatus	varchar(1)	Y	IssueStatus indicates the status of a security, as assigned by IDC. IssueStatus cross-references with dbo.PrcCode2 where <code>ascii(IssueStatus) = PrcCode2.Code</code> and <code>PrcCode2.Type_ = 5</code> .
SPCode	varchar(1)	Y	SPCode is described in the SPCode section on page 19.

prc.PrcInfo: United States Security Description Information

This table contains key security information, including security type, exchange traded, and ticker. Use the data in this table to describe and define a security.

Update Cycle: Daily

Adjusted: N/A

Indexes		Index Fields	
pkey_PrcInfo (Clustered)		Code	
PrcInfo_Cusip		Cusip	
PrcInfo_Issuer		Issuer	
PrcInfo_Sedol		Sedol	
PrcInfo_Ticker		Ticker	
Field	Type	Nullable	Description
Cusip	varchar(8)	N	Cusip is the new or existing CUSIP.
Issuer	varchar(30)	Y	Issuer is the name of the company that issued the security.
Issue	varchar(20)	Y	Issue is a text description of the security type. The text description is non-uniform and non-standard. Use SecType for classifying the stock as common, preferred, warrant, ADR, etc.
Ticker	varchar(12)	Y	Ticker represents BaseTicker + Group_ + Series, concatenated (blank spaces removed).

Field	Type	Nullable	Description
Sedol	varchar(6)	Y	Sedol is the Stock Exchange Daily Official List (SEDOL) number assigned to a security. If the table contains SEDOL change data, Sedol is the active SEDOL for the security during the period between the start and end date.
Country	varchar(2)	Y	Country returns the two-letter ISO country code for the issuer's country of incorporation. It cross-references with prc.PrcCur where Country = PrcCur.Country for the country name.
CurrEx	varchar(1)	Y	CurrEx is the current trading location or security group. It cross-references with dbo.PrcCode2 where ascii(CurrEx) = PrcCode2.Code and PrcCode2.Type_ = 2.
HistEx	varchar(1)	Y	HistEx is the historical location. It cross-references with dbo.PrcCode2 where ascii(HistEx) = PrcCode2.Code and PrcCode2.Type_ = 2.
SecType	varchar(1)	Y	SecType is a code representing the security type. It cross-references with dbo.PrcCode2 where ascii(SecType) = PrcCode2.Code and PrcCode2.Type_ = 1.
Status	varchar(1)	Y	Status indicates the status of a security, assigned by IDC. It cross-references with dbo.PrcCode2 where ascii(Status) = PrcCode2.Code and PrcCode2.Type_ = 5.
SIC	smallint	Y	SIC cross-references with dbo.PrcCode2 where SIC = PrcCode2.Code and PrcCode2.Type_ = 7.
Code	int	N	Code is the primary link across all Prc* tables.
PrimaryFlag	smallint	Y	PrimaryFlag is a flag for dually listed stocks that indicates the order in which a security is listed. A value of 1 indicates the security is listed first, a value of 0 indicates the security is not listed first.
LastUpdate	smalldatetime	Y	LastUpdate indicates the last time the information was updated.

To provide historical stock membership for domestic issues, join prc.PrcInfo to prc.PrcScChg. For example, the following query returns all the common stock issues that were trading on NASDAQ:

```
DECLARE @DATE SMALLDATETIME
SET @DATE = '5/15/2001'
SELECT
I.CUSIP AS CURRENT_CUSIP, I.ISSUER, I.SECTYPE, C.* FROM PRC.PRCINFO I JOIN
PRC.PRCSCCHG C ON I.CODE = C.CODE
WHERE @DATE >= C.STARTDATE
AND (@DATE <= C.ENDDATE OR C.ENDDATE IS NULL) AND I.SECTYPE IN ('C') -- COMMON
STOCK ONLY AND C.EXCHANGE = 'F' - NASDAQ
```

prc.PrcMcr: Pricing Market Cap Ranks

This table contains ranking of securities by market capitalization. Use the data in this table to find where a security ranks by market capitalization when compared to other stocks.

Update Cycle: Daily

Adjusted: Yes

Indexes	Index Fields
pkey_PrcMcr (Clustered)	Code, Date_

Field	Type	Nullable	Description
Code	int	N	Code is the primary link across all Prc* tables.
Date_	smalldatetime	N	Date_ is the first date for which the rank is valid.
RankAll	int	Y	RankAll is computed once a month and includes ADRs.
RankStk	int	Y	RankStk is computed once a month. It is U.S.-based only and does not include ADRs.

prc.PrcScChg: Pricing Historical Ticker, CUSIP, and Name Changes

This table contains change records for security identifiers. Use the data in this table to find non-current identifiers.

Update Cycle: Daily

Adjusted: N/A

Indexes	Index Fields
pkey_PrcScChg (Clustered)	Code, StartDate
PrcScChg_Cusip	Cusip, StartDate, Code
PrcScChg_Sedol	Sedol, StartDate, Code
PrcScChg_Ticker	Ticker, StartDate, Code

Field	Type	Nullable	Description
Code	int	N	Code is the primary link across all Prc* tables.
StartDate	smalldatetime	N	StartDate is the effective date of the change.
EndDate	smalldatetime	Y	EndDate is the last date before the change.
Cusip	varchar(8)	Y	Cusip is the new or existing CUSIP.
Ticker	varchar(12)	Y	Ticker represents BaseTicker + Group_ + Series, concatenated (blank spaces removed).
Sedol	varchar(6)	Y	Sedol is the Stock Exchange Daily Official List (SEDOL) number assigned to a security. If the table contains SEDOL change data, Sedol is the active SEDOL for the security during the period between the start and end date.
Issuer	varchar(40)	Y	Issuer is the name of the company that issued the security.
FullTicker	varchar(6)	Y	FullTicker represents BaseTicker + Group_ + Series. BaseTicker reserves positions 1 through 4, Group_ reserves position 5, and Series reserves position 6.
BaseTicker	varchar(4)	Y	BaseTicker is the base ticker without any Group_ or Series appendage.
Group_	varchar(1)	Y	Group_ cross-references with dbo.PrcCode2 where <code>ascii(Group_) = PrcCode2.Code</code> and <code>Type_ = 13</code> (for listed equities) or <code>Type_ = 14</code> (for non-listed equities).
Series	varchar(1)	Y	Series cross-references with dbo.PrcCode2 where <code>ascii(Series) = PrcCode2.Code</code> and <code>Type_ = 15</code> (for listed equities) or <code>Type_ = 16</code> (for non-listed equities).
Exchange	varchar(1)	Y	Exchange is described in the Exchange section on page 22.

prc.PrcsdLchg: Pricing Sedol Changes

This table contains historical SEDOLS assigned to a security. Use the data in this table to find an old SEDOL.

Update Cycle: Daily

Adjusted: N/A

Indexes	Index Fields
pkey_PrcsdLchg (Clustered)	Code, StartDate
PrcsdLchg_Sedol	Sedol, StartDate, Code

Field	Type	Nullable	Description
Code	int	N	Code is the primary link across all Prc* tables.
StartDate	smalldatetime	N	StartDate is the effective date of the change.
EndDate	smalldatetime	Y	EndDate is the last date before the change.
Sedol	varchar(6)	Y	Sedol is the Stock Exchange Daily Official List (SEDOL) number assigned to a security. If the table contains SEDOL change data, Sedol is the active SEDOL for the security during the period between the start and end date.

prc.PrcShr: Pricing Shares Outstanding

This table contains shares outstanding data for a security over time. Use the data in this table to find current or historical shares outstanding.

Update Cycle: Daily

Adjusted: No

Indexes	Index Fields
pkey_PrcShr (Clustered)	Code, Date_
PrcShr_Date_	Date_, Code, Shares

Field	Type	Nullable	Description
Code	int	N	Code is the primary link across all Prc* tables.
Date_	smalldatetime	N	Date_ is the date associated with the shares outstanding.
Shares	float	Y	Shares are the unadjusted shares outstanding. Note: Shares are stored on a monthly basis up to December 31, 2000, unless a split occurred mid-month. After December 31, 2000, shares are stored on a daily basis. For example, on May 27, 1999 IBM has an entry of 1841302016. May 27, 1999 is considered a mid-month split prior to December 31, 2000; therefore, the split factor was applied to the prior month's shares 920651008 to compute the value for May 27, 1999.

dbo.PrcTxtCode: IDC Pricing Text Codes

This table contains plain-language descriptions for codes and symbols used throughout the IDC pricing tables.

This legacy table has been replaced by [dbo.PrcCode2](#).

Update Cycle: Daily

Adjusted: N/A

Indexes	Index Fields
pkey_PrcTxtCode (Clustered)	Type_, Code

Field	Type	Nullable	Description
Type_	varchar(17)	N	Type_ is the name of the column to which the codes apply
Code	varchar(11)	N	Code is an integer that requires translation. Refer to Type_ for translation.
Desc_	varchar(180)	Y	Desc_ provides a plain-language description for a Code defined by Type_.

prc.Prctkchg: Pricing Historical Ticker Changes

This table contains historical ticker symbols and the dates for which the tickers are valid. Use the data in this table to find a security using an old ticker.

Update Cycle: Daily

Adjusted: N/A

Indexes	Index Fields
pkey_Prctkchg (Clustered)	Code, StartDate
Prctkchg_Ticker	Ticker, StartDate, Code

Field	Type	Nullable	Description
Code	int	N	Code is the primary link across all Prc* tables.
StartDate	smalldatetime	N	StartDate is the effective date of the change.
EndDate	smalldatetime	Y	EndDate is the last date before the change.

Field	Type	Nullable	Description
Ticker	varchar(12)	Y	Ticker represents BaseTicker + Group_ + Series, concatenated (blank spaces removed).

prc.PrcVol: Pricing Specialty Series

This table contains a breakdown of a given day's trading volume and related metrics. Data in this table is stored in local currency. Use the data to assess trade action and volume weighted average trade value for a given day.

Update Cycle: Daily

Adjusted: No

Indexes	Index Fields
pkey_PrcVol (Clustered)	Code, Date_
PrcVol_Date_	Date_, Code, Bid, Ask, Vwap, AvgTrade, BlockVol, NumTrades, CCFactor

Field	Type	Nullable	Description
Code	int	N	Code is the primary link across all Prc* tables.
Date_	smalldatetime	N	Date_ is date associated with the short interest entry.
Bid	real	Y	Bid is the most recent bid price.
Ask	real	Y	Ask is the most recent ask price.
Vwap	real	Y	Vwap is the Volume Weighted Average price. This price is based on regular trading volume as well as pre-market and post-market volume, and it is adjusted for cancels and corrections.
AvgTrade	real	Y	AvgTrade is the average number of shares per NumTrades.
BlockVol	real	Y	BlockVol is the composite block volume.
NumTrades	real	Y	NumTrades is the composite number of trades executed.
CCFactor	real	Y	CCFactor is the currency conversion factor. If CCFactor is less than or greater than one, the data is denominated in a currency other than USD. The factor represents the spot rate on the trading date.
Flags	tinyint	Y	Flags have been discontinued and should not be used.

prc.splitann: Split Dates and Rates

Use this table to retrieve split dates and rates.

Update Cycle: Daily

Adjusted: No

Indexes	Index Fields
pkey_splitann (Clustered)	Code, AnnDate
splitann_anndatecode	AnnDate, Code
splitann_codeexdate	Code, ExDate
splitann_codepaydate	Code, PayDate
splitann_exdatecode	ExDate, Code
splitann_paydatecode	PayDate, Code

Field	Type	Nullable	Description
Code	int	N	Code is the primary link across all Prc* tables.
AnnDate	smalldatetime	N	AnnDate is the announced date of the dividend, or the date on which the corporation or fund declared a split.

Field	Type	Nullable	Description
ExDate	smalldatetime	Y	ExDate is the ex-dividend date. The ex-dividend date is the date on and after which security transactions are generally not eligible for the income payment. If not available, it is nine-filled.
PayDate	smalldatetime	Y	PayDate is the date declared by a company on which a payment is to be made to stockholders, or on which a split occurs.
Ratio	float	Y	Ratio is a divisor for shares outstanding. Cross-reference Ratio with prc.PrcShr and apply the ratio to shares outstanding for the specified time period. The Ratio is a cumulative factor. Note that many ADRs have more than one divisor throughout their history.
