# 1 Introduction

## In This Document

This document provides schema information about the **Ownership Version 2** tables in LSEG Quantitative Analytics.

### NOTE

For information about the other Quantitative Analytics tables, refer to the other Database Schema documents posted on the [LSEG Quantitative Analytics](#) product page on [MyAccount](#).

The documentation for each table includes these main elements:

- **Vendor Database or License Name** – This element provides the vendor database or license name. Vendor databases generally correspond to vendor licensing options.
- **Table Name: Table Title** – This element provides the table name and title, followed by a description of the table contents.
- **Update Cycle** – This element indicates the frequency of updates from the data vendor. (For specific information about when this update is posted for your use, refer to your update logs. The update log schema description is available in the Database Schema for Quantitative Analytics Core Tables document.)
- **Adjusted** – This element indicates whether the data is stored adjusted, unadjusted, or if adjustment is not applicable (N/A).
- **Indexes, Index Fields** – This element lists the table's index(es) (for example, pkey\_CSGCAD) and the index fields. The primary index contains a "pkey\_" or "PK\_" prefix. Clustered indexes are noted.
- **Field, Type, Nullable, Definition** – This element describes the table's fields, including field names, data types, and whether each field is nullable. The data types in Snowflake have equivalents available. For example, an *int* in SQL Server is a *number* in Snowflake.

## Intended Readership

This document is intended for Quantitative Analytics clients licensed to use **Ownership Version 2** data through LSEG. Note that the tables described in this document may be covered by several licenses; your access to the data in these tables is dependent on the licenses you have. Readers should have basic knowledge of Microsoft SQL Server 2016.

## Table Name Conventions

In Quantitative Analytics, database tables are grouped by name. Generally, the first few letters of the table name refer to the data vendor or licensing group. For example, all tables beginning with **OWN2\*** are the Ownership Version 2 data tables.

## Mapping Information

Use Ownership data to obtain information about large-scale holders of specific securities.

The Quantitative Analytics schema for Ownership Version 2 is organized into several categories:

- Holdings data
  - Unconsolidated
  - Consolidated
- Investor data
  - Profile
  - Contacts
  - Transaction (Insider date)

- Statistics data
- Instrument data
- Mapping data

## Pervasive and Oracle

This document is specific to Microsoft SQL Server 2016. If you are accessing the data directly through the Pervasive database, you may encounter slight differences in index names and data types. Please note that references to Pervasive and Actian are synonymous.

If you are accessing the data through Oracle, note that field names that correspond to Oracle reserved words are appended with an underscore. For example, field names “Number”, “Synonym”, and “UID” become “Number\_”, “Synonym\_”, and “UID\_” in Oracle.

## Zero Values and Nulls

Null values are usually recorded as “NULL”. Occasionally, a table may contain a value of “-99999” or “-9999”; in these cases, there is no recorded data for that period. (It is null.) If the table contains a “0” value, the data was reported as having a “0” value.

## Service and Support

[MyAccount](#) is the LSEG portal that provides a single access point for timesaving support services, along with billing, user management, and information.

### Statement of Service

The [Quantitative Analytics Service Description](#) is available on the [LSEG Quantitative Analytics](#) product page at [MyAccount](#).

### Subscribe to Support Channels

You are encouraged to [subscribe](#) to the following support channels to keep informed of changes to products and data, and to be notified of any service issues or change. Please see the *Alerts and Notifications* section in the *Quantitative Analytics Service Description* available on the [LSEG Quantitative Analytics](#) product page at [MyAccount](#) for detailed instructions.

- **Change Notifications**
  - **Product Change Notifications (PCNs)** detail new, enhanced, or changed functionality, which may require your action, in products that you use.
  - **Data Notifications (DNs)** alert you to upcoming changes to real-time and historical data across all asset classes that are relevant to you.
  - **RIC Change Events** inform you of planned changes to RICs. RIC is the market level identifier key unique to LSEG used to identify securities.
- **Service Alerts**

Alert you about planned maintenance and unplanned service issues affecting your products and services, and be notified via SMS or email.

### Documentation

You can access product documentation on the [LSEG Quantitative Analytics](#) product page at [MyAccount](#).

### Get Support

For support using Quantitative Analytics, please use one of the following methods:

#### Online

Access [Get Support](#) either via the blue [Get Support](#) button at the top right of each page or by selecting *Get Support* located under *Help and Support* on the left navigation pane at [MyAccount](#).

From the *Get Support* page, choose *Get Product and Content Support* and then select the appropriate category from the next page. Complete the request making sure to include the following:

- Under Product, select Quantitative Analytics from the dropdown list.
- In the **How can we help you?** text box, include the following information:
  - Content set name (i.e. Worldscope)
  - Date applicable to a content inquiry
  - Table names and relevant fields
  - Security code (i.e. QA-ID, PermID, Sedol, InfoCode, etc.)
  - Script used to generate the output
  - Any other supporting detail

### Telephone

| Region | Telephone        | Options                                                    |
|--------|------------------|------------------------------------------------------------|
| AMERS  | +01 866 427 8390 | Option 1 – Product Support<br>Option 2 – Technical Support |
| EMEA   | +44 203 341 1036 |                                                            |
| APAC   | +65 6403 7436    |                                                            |

## Feedback

We invite your comments, corrections, and suggestions about this document: access the [Feedback](#) option under [Get Support](#) at [MyAccount](#). Your feedback helps us continue to improve our user assistance.

## Your Personal Information

LSEG is committed to the responsible handling and protection of personal information. We invite you to review our [Privacy and Cookie Statement](#), which describes how we collect, use, disclose, transfer, and store personal information when needed to provide our services and for our operational and business purposes.

# 2 Ownership Version 2 Tables

## Own2AsRepHldgShCla: Ownership As Reported Holdings Share Class

This table contains 'raw' (unaggregated) view of holdings data for the share class, showing all sources of holdings data for each owner.

**Update Cycle:** 30 minutes

**Adjusted:** Unadjusted

| Indexes                             | Index Fields                                                     |
|-------------------------------------|------------------------------------------------------------------|
| pkey_Own2AsRepHldgShCla (Clustered) | OwnershipId, PositionId, FilingTypeCode, HoldDate, ShClaTypeCode |

| Field          | Type          | Nullable | Description                                                                                                                                             |
|----------------|---------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| OwnershipId    | bigint        | No       | Unique identifier assigned to each Investor/Instrument relationship                                                                                     |
| PositionId     | int           | No       | Sequence number to uniquely identify each holdings report available for an investor                                                                     |
| FilingTypeCode | int           | No       | Filing Type Description. Cross references table <a href="#">Own2Code</a> where Type_ = 3.                                                               |
| HoldDate       | smalldatetime | No       | Date of shares reported (YYYYMMDD)                                                                                                                      |

# 3 SQL Views

The SQL Views provide simplified calls that run complex SQL code and address key data nuances and mapping requests in the Quantitative Analytics database, making it much easier to access data through LSEG Quantitative Analytics.

Customers are able to see the underlying SQL code and modify/customize it as required, as well as being able to save the modified code as their proprietary code.

Our Support Team is available to provide training on the library structure and how to use the SQL Views. Please contact [Support](#) if you would like the SQL views added to your server.

## vw\_Own2RDCMapping

This view provides the mapping for OwnershipIDs using RDC.

| Index Fields     |         |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| Field            | Type    | Nullable | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| InstrID          | int     | no       | InstrID is the Permanent Identifier of the instrument.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| InstrStatusCode  | char    | yes      | <p>For non-debt issues, if an issue asset/instrument has at least one quote that is active (AssetState = 'AC'), then AssetState is Active 'AC'. If all quote assets are deactivated (AssetState = 'DC'), then AssetState is Deactivated 'DC'. AssetState is derived for all asset types except debt issues that are maintained by the DBS forward feed.</p> <p>AssetState is 'NA' (Not Applicable) when no quote asset is found against the issue/instrument. In particular, new issues get 'NA' status as soon as they are created and until a quote is assigned to them. NA also applies to instruments not properly classified. States other than AC, DC, and NA are only set for fixed income issues.</p> <p>The full set of states is:</p> <ul style="list-style-type: none"> <li>– "CA" = "Called"</li> <li>– "DE" = "Defaulted"</li> <li>– "EX" = "Exchanged"</li> <li>– "ME" = "Merged"</li> <li>– "MA" = "Matured"</li> <li>– "RE" = "Redenominated"</li> <li>– "AC" = "Active"</li> <li>– "DC" = "De-activated"</li> <li>– "NA" = "Not applicable"</li> </ul> |
| ComName          | varchar | yes      | In most instances, ComName is not populated, except for equity indices and warrants sourced from DBS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| InstrCatCode     | char    | yes      | InstrCatCode is the two-level hierarchical asset classification scheme. Wherever possible, an asset is given a category from the lower level in the hierarchy. This field is always mapped to AssetType.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| InstrType        | varchar | yes      | InstrType is the single-level, broad asset classification scheme, used principally as an internal scheme for time series classification. This field is always mapped to the more granular AssetCategory scheme.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| MostReleMrkt     | char          | yes      | MostReleMrkt references the country where the instrument was first admitted to trading on a regulated market.                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| RCSAssetCla      | varchar       | yes      | RCSAssetCla is the Reference Classification Scheme classification.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| ShortName        | varchar       | yes      | ShortName is not mandatory for Issue Assets. This field may hold a value for some debt and commodities instruments (sourced from DBS and CMI respectively). No formal standard has been set.                                                                                                                                                                                                                                                                                                                                                                                        |
| OrgID            | int           | yes      | OrgID is the permanent identifier of the organization.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| PrimTrdQuotePI   | int           | yes      | PrimTrdQuotePI is similar to the VQ, but the tradable RIC is used. This is very US-specific where market cap for the issue must be calculated on a consolidated quote that is not a RIC you can trade. Therefore, PrimTrdQuotePI exists to denote the main "primary" quote of a multi-listed share line in the US that can be traded.                                                                                                                                                                                                                                               |
| TMTPerId         | varchar       | yes      | TMTPerId is the permanent Identifier of the Instrument in the TMT/TKO Database.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| GemPerId         | bigint        | yes      | GemPerId is the unique entity ID for the Instrument Entity. This field is currently sourced from GEM.                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| Fax            | varchar       | yes      | Fax number for investor                                                                                         |
| MetroArealId   | int           | yes      | Perm ID of investor's metro area. Cross references table <a href="#">Own2Code</a> where Type_ = 37.             |
| USRegionId     | int           | yes      | Perm ID of U.S. investor's geographic region. Cross references table <a href="#">Own2Code</a> where Type_ = 39. |
| InvStyleCode   | varchar       | yes      | Code for investment style of investor.                                                                          |
| InvStyleDesc   | nvarchar      | yes      | Description for the investment style of the investor.                                                           |
| InvOrientation | varchar       | yes      | Indicates if investor is active or passive.                                                                     |
| Website        | varchar       | yes      | URL for investor's website                                                                                      |
| LtstRepDate    | smalldatetime | yes      | Latest holdings date for investor                                                                               |
| PriorRepDate   | smalldatetime | yes      | Previous holdings date for investor                                                                             |
| IsActiveInv    | tinyint       | yes      | Indicates investor is active (i.e., still in existence)                                                         |
| IsNLE          | tinyint       | yes      | Investor no longer exists                                                                                       |
| IsNLEDate      | smalldatetime | yes      | Date investor ceased to exist                                                                                   |

**Example Use Case:**

```
--This query returns the Ownership IDs that have Microsoft as owned security.
select aa.*, cc.*
from vw_SecurityMasterX aa
join vw_RDCInstrMappingX bb
    on bb.SecCode = aa.seccode
    and bb.Typ = aa.typ
join vw_Own2RDCMapping cc
    on cc.InstrID = bb.venCode
where aa.id = 'MSFT'
order by cc.OwnershipId
```

## vw\_Own2PermMapping

This view provides the mapping for OwnershipIDs using Symbology content set.

| Index Fields      |               |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| IsPrimary         | bit           | yes      | Indicates if it is a primary instrument.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Status            | varchar       | yes      | For non debt issues if an Issue Asset/Instrument has at least one Quote which is Active (Asset State = 'AC'), then AssetState is Active 'AC', else, if all Quote Assets are Deactivated (Asset State = 'DC') then AssetState becomes Deactivated 'DC'. AssetState is derived for all Asset types except DEBT Issues which are maintained by the DBS forward feed. AssetState is 'NA' (Not Applicable) when no Quote Asset is found against the Issue/Instrument, in particular new Issues will get 'NA' status as soon as they get created and until a Quote is assigned to them. NA also applies to instruments not properly classified. States other than AC, DC and NA are only set for FI issues. The full set of states is: <ul style="list-style-type: none"> <li>CA – Called</li> <li>DE – Defaulted</li> <li>EX – Exchanged</li> <li>ME – Merged</li> <li>MA – Matured</li> <li>RE – Redenominated</li> <li>AC – Active</li> <li>DC – De-activated</li> <li>NA – Not applicable</li> </ul> |
| TypeCode          | varchar       | yes      | Single level, broad asset classification scheme, used principally as an internal scheme for timeseries classification. Always mapped to the more granular AssetCategory scheme, see above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| PriTrdQuotePermID | bigint        | yes      | This field identifies the quote for an instrument on the primary exchange it is traded on. This is applicable to multi-listed US-based companies.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| ValQuotePermID    | bigint        | yes      | This is the main 'primary' Quote for a multi-listed share line that is used to calculate Market Cap. In the US, for example, this will be the consolidated quote on NYSE, AMEX or NASDAQ. It is set for EVERY share line, because Market Cap can be calculated on the whole company or on each issue.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| OwnershipId       | bigint        | no       | Unique identifier assigned to each Investor/Instrument relationship                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| InvOrientation | varchar       | yes      | Indicates if investor is active or passive.                                                                     |
| Website        | varchar       | yes      | URL for investor's website                                                                                      |
| LtstRepDate    | smalldatetime | yes      | Latest holdings date for investor                                                                               |
| PriorRepDate   | smalldatetime | yes      | Previous holdings date for investor                                                                             |
| IsActiveInv    | tinyint       | yes      | Indicates investor is active (i.e., still in existence)                                                         |
| IsNLE          | tinyint       | yes      | Investor no longer exists                                                                                       |
| IsNLEDate      | smalldatetime | yes      | Date investor ceased to exist                                                                                   |

**Example Use Case:**

--This query returns the Ownership IDs that have Microsoft as owned security.

```

select aa.*, cc.*
from vw_SecurityMasterX aa
join vw_PermInstrMappingX bb
  on bb.SecCode = aa.seccode
  and bb.Typ = aa.typ
join vw_Own2PermMapping cc
  on cc.InstrPermID = bb.EntPermID
where aa.id = 'MSFT'
order by cc.OwnershipId

```

## vw\_Own2CHoldDet

This view shows the information presents in tables Own2CHoldDet and Own2CHoldShCla. Own2CHoldDet contains a single, comprehensive view of holdings data, reflecting all corporate actions, while Own2CHoldShCla carries the holdings data for share class information.

| Index Fields                               |               |          |                                                                                                                                                              |

### Example Use Case:

--This query returns the consolidated ownership history for Bailard as owner of Microsoft.

```
select aa.*, cc.*, dd.*
from vw_SecurityMasterX aa
join vw_RDCInstrMappingX bb
  on bb.SecCode = aa.seccode
  and bb.Typ = aa.typ
join vw_Own2RDCMapping cc
```

```

on cc.InstrID = bb.VenCode
join vw_Own2CHoldDet dd
on dd.OwnershipId = cc.OwnershipId
where aa.id = 'MSFT'
and cc.LgcyInvestorId = 2002497
order by dd.EffectFromDate

```

## vw\_Own2CAAdjUnadjHoldDet

This view provides adjusted and unadjusted values for Own2CHoldDet records. In case unadjusted values are not needed it is preferable the usage of vw\_Own2CHoldDet, it is faster because doesn't compute the unadjusted prices.

Computed adjusted and unadjusted values should not be used in the records with NULL CumRatio if their OwnershipId has some non-NULL CumRatio records.

| UpdateDate       | smalldatetime | yes      | Date holdings position was last updated                                                                                                                                                                                                                                                                     |

**Example Use Case:**

--This query returns the "as reported" ownership history for Bailard as owner of Microsoft.

```

select aa.*, cc.*, dd.*
from vw_SecurityMasterX aa
join vw_RDCInstrMappingX bb
  on bb.SecCode = aa.seccode
  and bb.Typ = aa.typ
join vw_Own2RDCMapping cc
  on cc.InstrID = bb.VenCode
join vw_Own2AsRepHld dd
  on dd.OwnershipId = cc.OwnershipId
where aa.id = 'MSFT'
  and cc.LgcyInvestorId = 2002497
order by dd.HoldDate

```

## vw\_Own2AsRepAdjUnadjHold

This view provides adjusted and unadjusted values for the as reported ownership records. If the adjusted values are not needed, it is preferable the usage of vw\_Own2AsRepHold, it will be faster because it doesn't compute the adjusted values.

Computed adjusted and unadjusted values should not be used in the records with NULL CumRatio if their OwnershipId has some non-NULL CumRatio records.

**Example Use Case:**

--This query returns the adjusted and unadjusted “as reported” ownership history for Bailard as owner of Microsoft.

```
select aa.*, cc.*, dd.*
from vw_SecurityMasterX aa
join vw_RDCInstrMappingX bb
  on bb.SecCode = aa.seccode
  and bb.Typ = aa.typ
join vw_Own2RDCMapping cc
  on cc.InstrID = bb.VenCode
join vw_Own2AsRepAdjUnadjHold dd
  on dd.OwnershipId = cc.OwnershipId
where aa.id = 'MSFT'
  and cc.LgcyInvestorId = 2002497
  and dd.CumRatio is not null
order by dd.HoldDate
```

**vw\_Own2RDC13F**

This view shows the information about the 13F portfolios linked with an OwnershipID, using RDC tables for the mapping.

| Index Fields                       |      |          |                                                                                                                                                                                                            |
|------------------------------------|------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OwnershipId, Port13FEffectFromDate |      |          |                                                                                                                                                                                                            |
| Field                              | Type | Nullable | Description                                                                                                                                                                                                |
| InstrID                            | int  | no       | InstrID is the Permanent Identifier of the instrument.                                                                                                                                                     |
| InstrStatusCode                    | char | yes      | For non-debt issues, if an issue asset/instrument has at least one quote that is active (AssetState = 'AC'), then AssetState is Active 'AC'. If all quote assets are deactivated (AssetState = 'DC'), then |

| Field            | Type    | Nullable | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|------------------|---------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                  |         |          | <p>AssetState is Deactivated 'DC'. AssetState is derived for all asset types except debt issues that are maintained by the DBS forward feed.</p> <p>AssetState is 'NA' (Not Applicable) when no quote asset is found against the issue/instrument. In particular, new issues get 'NA' status as soon as they are created and until a quote is assigned to them. NA also applies to instruments not properly classified. States other than AC, DC, and NA are only set for fixed income issues.</p> <p>The full set of states is:</p> <ul style="list-style-type: none"> <li>– "CA" = "Called"</li> <li>– "DE" = "Defaulted"</li> <li>– "EX" = "Exchanged"</li> <li>– "ME" = "Merged"</li> <li>– "MA" = "Matured"</li> <li>– "RE" = "Redenominated"</li> <li>– "AC" = "Active"</li> <li>– "DC" = "De-activated"</li> <li>– "NA" = "Not applicable"</li> </ul> |
| ComName          | varchar | yes      | In most instances, ComName is not populated, except for equity indices and warrants sourced from DBS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| InstrCatCode     | char    | yes      | InstrCatCode is the two-level hierarchical asset classification scheme. Wherever possible, an asset is given a category from the lower level in the hierarchy. This field is always mapped to AssetType.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| InstrType        | varchar | yes      | InstrType is the single-level, broad asset classification scheme, used principally as an internal scheme for time series classification. This field is always mapped to the more granular AssetCategory scheme.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| IssueISOCurrCode | char    | yes      | <p>IssueISOCurrCode is derived according to logic from the following fields:</p> <ul style="list-style-type: none"> <li>– Valuation Quote's Base Currency for Equity Issues</li> <li>– Principal Currency for Fixed Income (Debt) Issues</li> <li>– Quote Asset's Quotation Currency for Warrant Issues</li> </ul> <p>The issue currency data is system-driven. It is a derived attribute that is not able to be updated by applications. It will be updated by changes to the source fields (the currency held in either Valuation Quote Currency or Principal Currency fields). All changes made to these fields will trigger a matching change to be made to IssueISOCurrCode.</p> <p>RDCInstrInfo.IssueISOCurrCode cross-references with RDCDesc.Code where Type_ = 80867.</p>                                                                           |
| IsCDSCnv         | tinyint | yes      | IsCDSCnv is the most liquid contract for doc clause and currency.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| MifidStatusCode  | varchar | yes      | <p>MifidStatusCode indicates whether the security is subject to MIFID regulation:</p> <ul style="list-style-type: none"> <li>– MIFID-U: Mifid unconfirmed security</li> <li>– MIFID-E: Mifid eligible security</li> <li>– MIFID-L: Mifid top liquidity security</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| MostReleMrkt     | char    | yes      | MostReleMrkt references the country where the instrument was first admitted to trading on a regulated market.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| RCSAssetCla      | varchar | yes      | RCSAssetCla is the Reference Classification Scheme classification.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| ShortName        | varchar | yes      | ShortName is not mandatory for Issue Assets. This field may hold a value for some debt and commodities instruments (sourced from DBS and CMI respectively). No formal standard has been set.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| OrgID            | int     | yes      | OrgID is the permanent identifier of the organization.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| PrimTrdQuotePI   | int     | yes      | PrimTrdQuotePI is similar to the VQ, but the tradable RIC is used. This is very US-specific where market cap for the issue must be calculated on a consolidated quote that is not a RIC you can trade.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| Field                 | Type          | Nullable | Description                                                                                                                                                          |
|-----------------------|---------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                       |               |          | Therefore, PrimTrdQuotePI exists to denote the main "primary" quote of a multi-listed share line in the US that can be traded.                                       |
| TMTPerId              | varchar       | yes      | TMTPerId is the permanent Identifier of the Instrument in the TMT/TKO Database.                                                                                      |
| GemPerId              | bigint        | yes      | GemPerId is the unique entity ID for the Instrument Entity. This field is currently sourced from GEM.                                                                |
| OwnershipId           | bigint        | no       | Unique identifier assigned to each Investor/Instrument relationship                                                                                                  |
| InActInsiderDate      | smalldatetime | yes      | Inactive Insider Date                                                                                                                                                |
| AdminStatus           | varchar       | yes      | Indicates 'PUB' if Ownership is still publishing the reports.                                                                                                        |
| EffectFromDate        | smalldatetime | yes      | The date starting which the data is effective                                                                                                                        |
| EffectToDate          | smalldatetime | yes      | The date till which the data is effective                                                                                                                            |
| EntModDate            | smalldatetime | yes      | The date when Ownership ID related information was modified.                                                                                                         |
| EntCreateDate         | smalldatetime | yes      | The date when Ownership ID was created.<br>The attribute for historical entities is to be set to the earliest holdings date for that investor/attribute combination. |
| LgcyInvestorId        | int           | yes      | Legacy internal Ownership unique identifier for funds, organizations or persons proxied by Ownership rather than the appropriate database or record.                 |
| InvestorId            | bigint        | yes      | The ID for the Investor.                                                                                                                                             |
| FullName              | varchar       | yes      | Full Name (First and Last) of Investor                                                                                                                               |
| InvTypeCode           | nvarchar      | yes      | Investor Type Code                                                                                                                                                   |
| InvTypeDesc           | nvarchar      | yes      | Description of the Investor Type Code                                                                                                                                |
| AddrLine1             | varchar       | yes      | Investor's street address                                                                                                                                            |
| AddrLine2             | varchar       | yes      | Investor's street address                                                                                                                                            |
| AddrLine3             | varchar       | yes      | Investor's street address                                                                                                                                            |

**Example Use Case:**

```
--This query returns the 13F data for ESL Investments as owner of Dow Chemical.
select aa.*, cc.*
from vw_SecurityMasterX aa
join vw_RDCInstrMappingX bb
  on bb.SecCode = aa.seccode
  and bb.Typ = aa.typ
join vw_Own2RDC13F cc
  on cc.InstrID = bb.VenCode
where aa.id = 'DOW'
  and cc.LgcyInvestorId = 2002228
order by cc.Port13FEffectFromDate
```

**vw\_Own2Perm13F**

This view shows the information about the 13F portfolios linked with an OwnershipID, using Symbology tables for the mapping.

| Status                              | varchar | yes      | For non debt issues if an Issue Asset/Instrument has at least one Quote which is Active (Asset State = 'AC'), then AssetState is Active 'AC', else, if all Quote Assets are Deactivated (Asset State = 'DC') then AssetState becomes Deactivated 'DC'. AssetState is derived for all Asset types except DEBT Issues which are maintained by the DBS forward feed. AssetState is 'NA' (Not Applicable) when no Quote Asset is found against the Issue/Instrument, in particular new Issues will get 'NA' status as soon as they get created and until a Quote is assigned to them. NA also applies to instruments not properly classified. States other than AC, DC and NA are only set for FI issues. The full set of states is: <ul style="list-style-type: none"> <li>– CA – Called</li> <li>– DE – Defaulted</li> <li>– EX – Exchanged</li> <li>– ME – Merged</li> <li>– MA – Matured</li> <li>– RE – Redenominated</li> <li>– AC – Active</li> <li>– DC – De-activated</li> <li>– NA – Not applicable</li> </ul> |
| TypeCode                            | varchar | yes      | Single level, broad asset classification scheme, used principally as an internal scheme for timeseries classification. Always mapped to the more granular AssetCategory scheme, see above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| ComName                             | varchar | yes      | In most instances, ComName is not populated, except for equity indices and warrants sourced from DBS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| CurrPermID                          | bigint  | yes      | The Issue Currency ID.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| OrgPermID                           | bigint  | yes      | The id of the origination or body group to which an issuer relationship exists between the instrument and organization.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| Field                 | Type          | Nullable | Description                                                                                                                                                                                                                                                                                           |
|-----------------------|---------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PriTrdQuotePermID     | bigint        | yes      | This field identifies the quote for an instrument on the primary exchange it is traded on. This is applicable to multi-listed US-based companies.                                                                                                                                                     |
| ValQuotePermID        | bigint        | yes      | This is the main 'primary' Quote for a multi-listed share line that is used to calculate Market Cap. In the US, for example, this will be the consolidated quote on NYSE, AMEX or NASDAQ. It is set for EVERY share line, because Market Cap can be calculated on the whole company or on each issue. |
| OwnershipId           | bigint        | no       | Unique identifier assigned to each Investor/Instrument relationship                                                                                                                                                                                                                                   |

**Example Use Case:**

```
--This query returns the 13F data for ESL Investments as owner of Dow Chemical.
select aa.*, cc.*
from vw_SecurityMasterX aa
join vw_PermInstrMappingX bb
    on bb.SecCode = aa.seccode
    and bb.Type = aa.typ
join vw_Own2Perm13F cc
    on cc.InstrPermID = bb.EntPermID
where aa.id = 'DOW'
    and cc.LgcyInvestorId = 2002228
order by cc.Port13FEffectFromDate
```

### Example Use Case:

```
--This query shows the "as reported" records for the funds of Fidelity International, since 2018-01-01.
select *
from vw_Own2Funds aa
join vw_Own2AsRepAdjUnadjHold bb
  on bb.LgcyInvestorId = aa.LgcyFundId
  and bb.HoldDate between aa.EffectFromDate and ISNULL(aa.EffectToDate, '2075-05-05')
where aa.LgcyInvestorId = 2003665
  and bb.holddate >= '2018-01-01'
order by aa.LgcyFundId, bb.HoldDate
```

| ContRank       | int     | yes      | Ranking for investor contact. Useful in identifying primary contact for firm.                                                                                                                                                                                                                                                                                                                                                  |

**Example Use Case:**

--This query returns the information about funds formerly managed by people that have worked in Ashfield Capital Partners, LLC

```
select *
from Own2InvMap aa
join vw_Own2invPerson bb
on bb.LgcyInvestorId = aa.LgcyInvestorId
```

```

where aa.LgcyInvestorId = 2002482
      and bb.AddrTypeCode = 2
      and bb.BioTypeCode = 4

```

## vw\_Own2InvestorPortStat

This view shows the statistics for investor's portfolios, with company-related ratios aggregated to portfolio level for each investor.

**Example Use Case:**

```
--This query returns the portfolio statistics of the investor Muizuho Bank.
select *
from vw_Own2InvestorPortStat aa
where aa.LgcyInvestorId = 2003918
order by TypeId, CalcBasisCode, IncWrntsCert
```

**vw\_Own2RDCInvTransaction**

This view provides information about the investor transactions using RDC tables for the mapping.

| InstrStatusCode  | char    | yes      | <p>For non-debt issues, if an issue asset/instrument has at least one quote that is active (AssetState = 'AC'), then AssetState is Active 'AC'. If all quote assets are deactivated (AssetState = 'DC'), then AssetState is Deactivated 'DC'. AssetState is derived for all asset types except debt issues that are maintained by the DBS forward feed.</p> <p>AssetState is 'NA' (Not Applicable) when no quote asset is found against the issue/instrument. In particular, new issues get 'NA' status as soon as they are created and until a quote is assigned to them. NA also applies to instruments not properly classified. States other than AC, DC, and NA are only set for fixed income issues.</p> <p>The full set of states is:</p> <ul style="list-style-type: none"> <li>– "CA" = "Called"</li> <li>– "DE" = "Defaulted"</li> <li>– "EX" = "Exchanged"</li> <li>– "ME" = "Merged"</li> <li>– "MA" = "Matured"</li> <li>– "RE" = "Redenominated"</li> <li>– "AC" = "Active"</li> <li>– "DC" = "De-activated"</li> <li>– "NA" = "Not applicable"</li> </ul> |
| ComName          | varchar | yes      | In most instances, ComName is not populated, except for equity indices and warrants sourced from DBS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| InstrCatCode     | char    | yes      | InstrCatCode is the two-level hierarchical asset classification scheme. Wherever possible, an asset is given a category from the lower level in the hierarchy. This field is always mapped to AssetType.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| InstrType        | varchar | yes      | InstrType is the single-level, broad asset classification scheme, used principally as an internal scheme for time series classification. This field is always mapped to the more granular AssetCategory scheme.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| IssueISOCurrCode | char    | yes      | <p>IssueISOCurrCode is derived according to logic from the following fields:</p> <ul style="list-style-type: none"> <li>– Valuation Quote's Base Currency for Equity Issues</li> <li>– Principal Currency for Fixed Income (Debt) Issues</li> <li>– Quote Asset's Quotation Currency for Warrant Issues</li> </ul> <p>The issue currency data is system-driven. It is a derived attribute that is not able to be updated by applications. It will be updated by changes to the source fields (the currency held in either Valuation Quote Currency or Principal Currency fields). | PrimTrdQuotePI   | int           | yes      | PrimTrdQuotePI is similar to the VQ, but the tradable RIC is used. This is very US-specific where market cap for the issue must be calculated on a consolidated quote that is not a RIC you can trade. Therefore, PrimTrdQuotePI exists to denote the main "primary" quote of a multi-listed share line in the US that can be traded. |
| TMTPerMId        | varchar       | yes      | TMTPerMId is the permanent Identifier of the Instrument in the TMT/TKO Database.                                                                                                                                                                                                                                                      |
| GemPerMId        | bigint        | yes      | GemPerMId is the unique entity ID for the Instrument Entity. This field is currently sourced from GEM.                                                                                                                                                                                                                                |
| OwnershipId      | bigint        | no       | Unique identifier assigned to each Investor/Instrument relationship                                                                                                                                                                                                                                                                   |

| Status                                                                                | varchar       | yes      | For non debt issues if an Issue Asset/Instrument has at least one Quote which is Active (Asset State = 'AC'), then AssetState is Active 'AC', else, if all Quote Assets are Deactivated (Asset State = 'DC') then AssetState becomes Deactivated 'DC'. AssetState is derived for all Asset types except DEBT Issues which are maintained by the DBS forward feed. AssetState is 'NA' (Not Applicable) when no Quote Asset is found against the Issue/Instrument, in particular new Issues will get 'NA' status as soon as they get created and until a Quote is assigned to them. NA also applies to instruments not properly classified. States other than AC, DC and NA are only set for FI issues. The full set of states is: <ul style="list-style-type: none"> <li>– CA – Called</li> <li>– DE – Defaulted</li> <li>– EX – Exchanged</li> <li>– ME – Merged</li> <li>– MA – Matured</li> <li>– RE – Redenominated</li> <li>– AC – Active</li> <li>– DC – De-activated</li> <li>– NA – Not applicable</li> </ul> |
| TypeCode                                                                              | varchar       | yes      | Single level, broad asset classification scheme, used principally as an internal scheme for timeseries classification. Always mapped to the more granular AssetCategory scheme, see above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| RoleTypeCode | int           | yes      | Relationship of insider to issuer (e.g., director, CEO, etc). <ul style="list-style-type: none"> <li>– Cross reference code to description with Own2Code using both Type_ 34 and 7</li> <li>– Use Own2Code table where Type_ = 34 to map from the RoleTypeCode integer to alpha, numeric or special code.</li> <li>– Own2InvtransRole.RoleTypeCode = Own2Code.Code and Own2Code.Type_ = 34</li> <li>– Use Own2Code table where Type_ = 7 to map from alpha, numeric or special code in Type_ = 34 Desc_ to description for RoleTypeCode</li> <li>– Own2Code.Desc_ = Own2Code.Code and Own2Code.Type_ = 7</li> </ul> <p>Example:<br/> select * from Own2InvtransRole A<br/> join Own2Code B on A.RoleTypeCode = B.Code and B.Type_ = 34<br/> join Own2Code C on B.Desc_ = C.Code and C.Type_ = 7<br/> where A.OwnershipID = 48434388335</p> |
| RoleTypeDesc | nvarchar      | yes      | RoleTypeCode description.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| RoleSeqNum   | int           | yes      | Sequence number to uniquely identify multiple roles reported for a particular investor's transaction                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

**Example Use Case:**

--This query returns the information about the transactions made by investor TA Associates Management.

```
select aa.*, cc.*
from vw_SecurityMasterX aa
join vw_PermInstrMappingX bb
  on bb.SecCode = aa.seccode
  and bb.Typ = aa.typ
join vw_Own2PermInvTransaction cc
  on cc.InstrPermID = bb.EntPermID
where cc.LgcyInvestorId = 2004491
order by aa.id, cc.TransDate, cc.TrdSeqNum, cc.HoldTypeCode
```

**vw\_Own2RDCIssuer**

This view provides information about the freefloat of the securities of a given issuer using RDC tables for the mapping.

| CalcBasisCode   | tinyint | no       | Indicates the period basis for calculations. Cross references table <a href="#">Own2Code</a> where Type_ = 17.<br>The options are:<br><ul style="list-style-type: none"> <li>– 1 (M) = Monthly</li> <li>– 2 (Q) = Quarterly</li> </ul>                                                                                                                                                       |
| CalcBasisDesc   | varchar | yes      | Calc basis code description.                                                                                                                                                                                                                                                                                                                                                                 |

| Field                | Type          | Nullable | Description                                                                                                                                                               |
|----------------------|---------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| EffectFromDate       | smalldatetime | no       | The date starting which the data is effective                                                                                                                             |
| EffectToDate         | smalldatetime | yes      | The date till which the data is effective                                                                                                                                 |
| FreeFlt              | bigint        | yes      | Company-level free float, representing all of its public equity instruments                                                                                               |
| FreeFltPct           | float         | yes      | Company-level free float as a percent of total shares outstanding of all public equity instruments                                                                        |
| ShsHldStgInv         | bigint        | yes      | Represents the number of shares held by strategic investors (Corporations, Holding Companies, Individuals and Government Agencies) for all publicly-traded share classes. |
| FreeFltAdjRestShs    | float         | yes      | Number of shares in Free Float, taking into account any restricted shares. (Issuer-level)                                                                                 |
| FreeFltPctAdjRestShs | float         | yes      | Free Float Percent, taking into account any restricted shares. (Issuer-level)                                                                                             |
| NoOfRestShs          | float         | yes      | Number of restricted shares for the period in question (as defined by the Start and End Dates). (Issuer-level)                                                            |
| RestPeriodStDate     | datetime      | yes      | Start Date of the period for which the shares are restricted. (Issuer-level.)                                                                                             |
| RestPeriodEndDate    | datetime      | yes      | End Date of the period for which the shares are restricted. (Issuer-level.)                                                                                               |
| NoOfUnRestShs        | float         | yes      | Number of unrestricted shares for the period in question (as defined by the Start and End Dates). (Issuer-level)                                                          |
| RestUnrestShsDate    | datetime      | yes      | Date when Issuer reported the restricted and unrestricted shares                                                                                                          |
| PctShsHldByStgInv    | float         | yes      | Percent of shares outstanding held by strategic entities (e.g., individual investors, corporations, etc.) (Issuer-level.)                                                 |

### Example Use Case:

--This query returns the free float information about Vicor Corp.

```
select aa.*, cc.*
from vw_SecurityMasterX aa
join vw_RDCOrgMappingX bb
  on bb.SecCode = aa.seccode
  and bb.Typ = aa.typ
join vw_Own2RDCIssuer cc
  on cc.OrgId = bb.VenCode
where aa.id = 'VICR'
order by cc.CalcBasisCode, cc.EffectFromDate
```

## vw\_Own2PermlIssuer

This view provides information about the freefloat of the securities of a given issuer using Symbology tables for the mapping.

| NoOfUnRestShs        | float         | yes      | Number of unrestricted shares for the period in question (as defined by the Start and End Dates). (Issuer-level)                                                                                                                                                                                                                                                                                                                                                                    |
| RestUnrestShsDate    | datetime      | yes      | Date when Issuer reported the restricted and unrestricted shares                                                                                                                                                                                                                                                                                                                                                                                                                    |
| PctShsHldByStgInlv   | float         | yes      | Percent of shares outstanding held by strategic entities (e.g., individual investors, corporations, etc.) (Issuer-level.)                                                                                                                                                                                                                                                                                                                                                           |

**Example Use Case:**

```
-- This query returns the free float information about Vicor Corp.  
select aa.*, dd.*  
from vw_SecurityMasterX aa  
join vw_PermInstrMappingX bb  
  on bb.SecCode = aa.seccode  
  and bb.Typ = aa.typ  
join PermInstrRef cc  
  on cc.InstrPermID = bb.EntPermID  
join vw_Own2PermIssuer dd  
  on dd.OrgPermID = cc.OrgPermID  
where aa.id = 'VICR'  
  and dd.AddrTypeCode = 1  
order by dd.CalcBasisCode, dd.EffectFromDate
```
